Endorsement and Statement by the Board of Directors and the CEO

The Consolidated Financial Statements of Íslandsbanki hf. for the period ended 31 December 2010 comprise the Financial Statements of Íslandsbanki hf. and its subsidiaries, together referred to as "the Bank".

Foundation and ownership

The Bank was incorporated on 8 October 2008 and commenced trading on 15 October 2008 when it acquired assets and liabilities relating to the domestic operations of Glitnir Banki hf. ("Glitnir") which had been taken into public ownership following the passing of an Emergency Act in October 2008.

On 15 October 2009 the Resolution Committee of Glitnir exercised an option to acquire 95% of the share capital of the Bank with effect from 11 September 2009. The government retains 5% of the share capital of the Bank.

The Bank's parent company is ISB Holding ehf. which is owned by a subsidiary of Glitnir (GLB Holding ehf.).

Six Board members are appointed by ISB Holding ehf. One Board member is appointed by the Icelandic State Banking Agency (Bankasýsla ríkisins).

Operations

The Bank is divided into six business segments: Retail Banking, Corporate Banking, Wealth Management, Treasury, Markets and Midengi (an asset management company).

The Bank offers comprehensive financial services to individuals, households, corporations and professional investors in Iceland. The Bank's expertise in its niche area of seafood and geothermal energy has led to an expansion of advisory services into the USA.

At balance sheet date there were 1093 full-time employees at the Bank.

Risk Management

The Bank is exposed to various risks through its use of financial instruments. Managing these risks is an integral part of the Bank's operations. The ultimate responsibility for ensuring an adequate risk management framework lies with the Board of Directors. The Board defines and communicates the acceptable level of risk through the Bank's risk management policies. The Bank's risk management is discussed in under note 63.

The reporting period

The economic environment in Iceland during 2010 was fragile and is likely to continue to be so for some time to come.

Landmark Supreme Court rulings were passed during the year in relation to loans denominated in Icelandic currency to the value of foreign currencies. Subsequently, a Parliament Act was passed, amending the laws on interest and indexation. This has further clarified the uncertainty relating to the Bank's leasing contracts and home mortgages affected by the rulings. The financial effect of the rulings and the Parliament Act is fully reflected in the consolidated financial statements 2010 and the Bank has already offered the customers of Asset Based Financing to settle their loan contracts based on the Supreme Court rulings.

The effect on other types of foreign currency loan contracts still remains uncertain and several court rulings are expected in 2011 on whether or not certain types of loans are truly foreign currency denominated loans, or are deemed to be illegally linked to foreign currencies. Uncertainties in this regard are further discussed under note 60.

One of the Bank's main focuses in 2010 was the restructuring of the acquired loan assets in order to facilitate the individuals' and corporations' ability to service their debt and to maximise recovery. This work will continue in 2011.

The Bank's operations and processes have been analysed and improved to enhance objectivity, transparency and disciplined processes. By improving the proficiency of its lending and risk management systems, the Bank ensures that it maintains a robust position in serving its customers and sustaining healthy operations.

Endorsement and Statement by the Board of Directors and the CEO

Outlook

In wake of the economic collapse in 2008, unemployment rose significantly, the ISK lost almost half of its value, housing prices fell and inflation surged. In the period following, public consumption dropped considerably, taxes were increased and large construction projects were scaled back. As a result, households and companies have been de-leveraging alongside a corresponding slowdown in new lending activities.

The temporary capital controls, put in place in October 2008, have restricted the domestic market environment and the market for swaps and options has since been more or less non-existent.

Although the economy has been in dire straits since 2008, the financial markets have recently been showing their first signs of recovery. During the year 2010, the ISK has strengthened, inflation has subsided and interest rates have come down. The sovereign CDS trading level has declined and the current economic isolation is expected to gradually give way to a more open economy.

The present general distrust towards financial institutions will only be resolved with a continuous effort to improve openness and transparency. The Bank has vowed that it will let its actions speak louder than words in its efforts to encourage greater trust in its operations.

The Bank's strong capital and liquidity position gives it an excellent base to continue supporting the recovery of the Icelandic economy.

Accounting convention

The consolidated financial statements for the year ended 31 December 2010 have been prepared on a going concern basis in accordance with the International Financial Reporting Standards (IFRS) as adopted by the European Union.

Profit from the Bank's operations for the year ended 31 December 2010 amounted to ISK 29,369 million, which corresponds to a 28.5% return on equity. The Board of Directors proposes to pay no dividend for the year 2010. Bank equity, according to the consolidated balance sheet, amounted to ISK 121,463 million at year end. The Bank's total capital ratio, calculated according to the Act on Financial Undertakings, was 26.6%. Under Icelandic law the minimum requirement is 8.0%. The Bank's total assets amounted to ISK 683,222 million at year end.

To the best of our knowledge, the consolidated financial statements provide a true and fair view of the Bank's operating profits and its financial position at 31 December 2010. It also describes the principal risks and uncertainties currently faced by the Bank. These are discussed further under notes 2.4 and 60.

The Board of Directors and the CEO of Íslandsbanki hf. hereby confirm the Bank's consolidated financial statements for the period 1 January to 31 December 2010 by means of their signatures.

Reykjavík, 1 March 2011

Board of Directors:

Five handwritten signatures in blue ink, representing the members of the Board of Directors.

Two handwritten signatures in blue ink, representing additional members of the Board of Directors.

Chief Executive Officer:

A handwritten signature in blue ink, representing the Chief Executive Officer.

Independent Auditors' Report

To the Board of Directors and Shareholders of Íslandsbanki hf.

We have audited the accompanying Consolidated Financial Statements of Íslandsbanki hf. and its subsidiaries (the "Bank"), which comprise the Consolidated Statement of Financial Position as at 31 December 2010, and the Consolidated Statement of Comprehensive Income, Consolidated Statement of Changes in Equity, and Consolidated Statement of Cash Flow for the period then ended, and a summary of significant accounting policies and other explanatory notes.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with International Financial Reporting Standards as adopted by the EU. This responsibility includes: designing, implementing and maintaining internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error; selecting and applying appropriate accounting policies; and making accounting estimates that are reasonable in the circumstances.

Auditor's Responsibility

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audit. We conducted our audit in accordance with International Standards on Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the Consolidated Financial Statements give a true and fair view of the consolidated financial position of Íslandsbanki hf. as of 31 December 2010, and of its consolidated financial performance and its consolidated cash flows for the period then ended in accordance with International Financial Reporting Standards as adopted by the EU.

Emphasis of Matter

Without qualifying our opinion we draw your attention to:

The notes 2.4 and 2.5 in the consolidated Financial Statements, which discuss the uncertainties in the valuation of acquired assets at deep discount. The note 2.4 also refers to note 60 which discusses further contingencies relating to the acquired loan assets.

Consolidated Statement of Cash Flows for the year 2010

	Notes	2010	2009
Cash flows from operating activities:			
Profit for the year		29,369	23,982
Adjustments to reconcile profit for the year to cash flows used in operating activities:			
Non-cash items included in profit for the year and other adjustments.....	61	4,806	6,888
Changes in operating assets and liabilities	62 (	45,928)	6,572
Income tax paid	(	3,573)	(347)
Net cash (used in) provided by operating activities	(	15,326)	37,095
Cash flows from investing activities:			
Investments in associated companies	(	46)	9
Investment property		377	0
Purchase of property and equipment	(	937)	(585)
Purchase of intangible assets	42 (	118)	(127)
Net cash used in investing activities	(	724)	(703)
Cash flows from financing activities:			
Issued new shares		0	89
Net cash provided by financing activities		0	89
Net (decrease) increase in cash and cash equivalents		(16,050)	36,481
Effects of exchange rate changes on cash and cash equivalents		(115)	463
Cash and cash equivalents at the beginning of the year		53,317	16,373
Cash and cash equivalents at year end		37,152	53,317
Reconciliation of cash and cash equivalents:			
Cash in hand	26	1,833	1,842
Cash balances with Central Bank	26	23,217	30,313
Bank accounts	31	12,102	21,162
Total cash and cash equivalents		37,152	53,317

The Bank has prepared its Consolidated Statement of cash flows using the indirect method. The Statement is based on the net profit after tax for the year and shows the cash flows from operating, investing and financing activities and the increase or decrease in cash and cash equivalents during the year. Cash and cash equivalents consist of highly liquid assets that are readily convertible into cash and which are subject to an insignificant risk of change in value. These are cash in hand, unrestricted balances with Central Bank and demand deposits with credit institution.

Non-cash transactions 2010

During 2010 the Bank entered into the following non-cash investing and financing activities which have been excluded from the Consolidated Statement of Cash Flows:

a) As part of its restructuring process, the Bank changed debt instruments to equity instruments for the sum of 3.3bn ISK. The transaction had no cash effect on the Bank.

b) A government secured customer loan for the amount of 45bn and money market loans for 5bn were reclassified from loans to credit institutions to loans to customers due to a change in entities' operations. The transactions had no cash effect on the Bank.

Consolidated Statement of Cash Flows for the year 2010

Non-cash transactions 2009

During 2009 the Bank entered into the following non-cash investing and financing activities which have been excluded from the Consolidated Statement of Cash Flows:

- a) The government sold 95% of its shareholding to ISB Holding a holding company owned by GLB Holding, a subsidiary of Glitnir. Consideration for the sale was in the form of an offset of government bonds held by the Bank against the Bank's debt to Glitnir of 66bn. The transaction had no cash effect on the Bank.
- b) The Bank assumed deposits for 45bn against a government secured bond. The transaction had no cash effect on the Bank.

The notes on pages 11 to 84 are an integral part of these consolidated financial statements

Notes to the Consolidated Financial Statements

1. General information

Íslandsbanki hf. is a limited company incorporated and domiciled in Iceland. The address of its registered office is Kirkjusandur 2, 155 Reykjavík, Iceland.

The consolidated financial statements for the year ended 31 December 2010 were prepared on a going concern basis and comprise Íslandsbanki hf. (the parent) and its subsidiaries (together referred to as "the Bank"). Comparative information refers to the year ended 31 December 2009.

The Bank was incorporated on 8 October 2008 and commenced trading on 15 October 2008 when it acquired assets and liabilities relating to the domestic operations of Glitnir Banki hf. ("Glitnir").

Ownership of the Bank is divided between 95% shareholding of ISB Holding ehf, owned by a subsidiary of Glitnir (GLB Holding ehf.), and 5% shareholding of the Icelandic government.

The Bank provides a wide range of financial services such as retail banking, corporate banking, brokerage services, investment management and asset-based financing. The Bank operates mainly in the Icelandic market, but provides advisory services in relation to seafood and geothermal energy in the USA.

The following comparative amounts have been changed due to adjustments between the years:

Comparative information under note 59 for custody assets has been changed from 1,473,873 to 682,166 due to retrospective revaluation.

Comparable information under note 57 for guarantees and committed undrawn lines of credit has been changed from 9,593 and 5,165 to 8,058 and 5,028, respectively, due to eliminations.

Comparable information under note 8 for deposits from credit institutions has been changed from 143,752 to 139,229, for deposits to customer from 339,659 to 339,777 and for debt issued and other borrowed funds from 69,190 to 70,188 due to a change in methodology.

The consolidated financial statements are presented in Icelandic krona (ISK), which is the functional currency of the Bank. The amounts are presented in ISK million, unless otherwise mentioned.

The consolidated financial statements were approved and authorised for issue by the Board of Directors of Íslandsbanki hf. on 1 March 2011.

Notes to the Consolidated Financial Statements

2. Basis of preparation

2.1 Statement of compliance

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the European Union.

Information about IFRS and amendments to IFRS issued but not effective for the period ended 31 December 2010 is disclosed in note 3.33.

2.2 Basis of measurement

The consolidated financial statements are prepared on a historical cost basis, except for the following assets and liabilities, which are measured at fair value: bonds and debt instruments, shares and equity instruments, derivative financial instruments, loans to customers designated at fair value through profit or loss, debt issued and designated at fair value through profit or loss and investment property.

Non-current assets and disposal groups held for sale are measured at the lower of carrying amount and fair value less costs to sell.

2.3 Significant accounting judgements and estimates

The preparation of the consolidated financial statements in conformity with IFRS as adopted by the EU, requires management to make judgements, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, income and expenses recognised in the consolidated financial statements. The accounting estimates and underlying assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances. Actual results may differ from these estimates.

The accounting estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised and in any future periods affected.

The most significant accounting areas of estimation uncertainty and critical judgements in applying accounting policies relate to the following:

a) *Going concern*

The Bank has strengthened its debt management functions and works closely with customers who are experiencing payment difficulties in order to ensure maximum recovery of its assets.

Uncertainties in relation to the valuation and recoverability of the assets acquired from Glitnir are discussed under note 2.4. The full extent of the repercussions that are likely to be experienced in wake of the recession which Iceland is currently undergoing is difficult to ascertain. The Bank continues to monitor its loan portfolio closely in the context of developments within the Icelandic economy as well as in markets abroad.

In September 2010 the Supreme Court ruled that a principal in ISK could not be linked to foreign currencies. The Supreme Court subsequently ruled that the lowest offered Central Bank rates for non-indexed loans should be applied to these loans instead of the contractual interest rate. The Bank's leasing contracts fall under this ruling. The Bank has already offered customers of Asset Based Financing to settle their loan contracts based on these rulings and the financial effect is fully reflected in the consolidated financial statements 2010.

The Supreme Court ruling on which interest rates to use for loan contracts that are deemed to be illegally linked to foreign currency gives precedence and has therefore reduced the Bank's uncertainty as to the financial impact of future rulings. The effect on other types of foreign currency loans remains uncertain.

Since its incorporation the Bank has been subject to a currency risk due to a mismatch in the contractual currencies in the assets and liabilities of the Bank. This imbalance has been offset to some extent by the Bank's treatment of loans with non-ISK contractual currency to borrowers with ISK-based income as ISK assets, whereby the Bank impairs any increase in loan balances due to depreciation of the ISK. Borrowers with ISK income have been offered the option to convert their non-ISK loans into ISK-based loans at a discount.

To address the remaining imbalance, the Bank entered into a foreign exchange swap on 30 December 2010. Currency risk is further discussed under note 77.

Notes to the Consolidated Financial Statements

2.3 Cont'd

Currently, most of the Bank's funding is from on-demand deposits. The Bank is confident that this will change over the coming years as investors' risk aversion reduces and they start seeking higher yielding investment opportunities. In the future, the Bank will focus on extending the maturities of its deposit base and at the same time start to issue short term unsecured notes and, to some extent, longer term secured bonds. Access to funding in foreign currencies will be limited in the short to medium term, although international markets are improving rapidly.

The Bank's management has made an assessment of the Bank's ability to continue as a going concern and is satisfied that the Bank has the resources to continue in business for the foreseeable future. Therefore, the financial statements continue to be prepared on a going concern basis.

b) *Determination of fair value*

The Bank determines the fair value of financial assets and financial liabilities that are not quoted in active markets by using valuation techniques as described in accounting policy note 3.6. To the extent that it is practical, models use only observable data. However, for financial instruments that trade infrequently and have little price transparency, fair value is less objective and requires varying degrees of judgement depending on liquidity, concentration, uncertainty of market factors, pricing assumptions and other risks affecting the specific instrument, such as credit risk (both own and counterparty).

c) *Impairment allowances for loans and receivables*

The Bank recognises allowances for impairment for loans and receivables. For this purpose the Bank's management reviews its loan portfolios on a quarterly basis to assess whether there is any objective evidence of impairment. In determining whether an impairment allowance should be recognised in the statement of comprehensive income, the Bank's management makes judgements as to whether there is any observable data indicating that there is a measurable decrease in the estimated future cash flows from loans and receivables. This evidence may include observable data indicating that there has been an adverse change in the payment status of borrowers in a group, or national or local economic conditions that correlate with defaults on assets in the group.

When scheduling its future cash flows the Bank's management uses estimates based on loans and receivables with similar credit risk characteristics and objective evidence of impairment similar to those in the portfolio. The methodology and assumptions used for estimating both the amount and timing of future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience.

Impairment allowance for loans and receivables is disclosed in more detail in note 3.22.

d) *The application of the effective interest method*

The application of the effective interest method when calculating the amortised cost of financial assets and financial liabilities requires management to estimate future cash payments or receipts through the expected life of the financial instrument, considering all contractual terms of the financial instrument (for example, prepayment, call and similar options). Revisions to estimates of future cash flows, other than those arising from changes in market variables, generally result in the Bank having to adjust the carrying amount of the financial asset or financial liability to reflect actual and revised estimated cash flows. In such cases the adjustment is recognised as income or expense in profit or loss in the period in which the estimate is revised.

e) *Liquidity*

The Bank manages its liquidity by maintaining an adequate portfolio of liquid assets against liabilities. Internal liquidity limits assume that liquid assets cover all liabilities expected to mature within the next 12 month period, even under stressed market conditions.

Since a large part of the Bank's liabilities is in the form of demand deposits, the expected maturity profile is based on analysis of the historical behaviour and other characteristics of the deposit base.

The contractual maturity profile is set out in the liquidity risk disclosure in note 70. The table requires judgement with respect to whether assets can be considered liquid and when deposits will be withdrawn.

Notes to the Consolidated Financial Statements

2.4 Assumptions and uncertainties in relation to the acquired portfolio

There are uncertainties in the valuation of the assets acquired at a deep discount (see note 2.5 a). The Bank's management has, however, striven to reach the best appropriate value estimates based on known facts, their knowledge of the customers and the scheduled debt relief programs.

Factors that can affect the recovery value of the loan portfolio include macroeconomic parameters such as the unemployment rate, inflation and wage growth, actions taken by the government to facilitate and ease debt service and possible new legislation that lengthens the collection process or increases taxation and the extent of customer participation in flexible maturity and payment equalisation programmes.

The initial valuation was based on expected five-year cumulative cash flows with conservative estimates for collateral values and a prudent risk premium and the Bank's management is confident that the valuation of the acquired portfolio is robust enough to absorb the effects of realistic perturbations in applied assumptions. The initial valuation is discussed in detail in the consolidated financial statements 2009.

Contingencies relating to the acquired loan assets are further discussed under note 60.

2.5 Financial effects of assets acquired at deep discount

a) *Deep discount*

A loan is defined as having been acquired at a deep discount when the fair value purchase price is considerably lower than the balance according to the terms of the loan. The difference is explained by severe financial difficulties of the debtor which manifests itself in a higher credit spread when estimating the fair value of the loans and not because of changes in business environment since the terms of the loan were agreed i.e. market interest and liquidity.

A large proportion of the Bank's current financial assets were acquired at a deep discount. Credit losses already incurred were reflected in the purchase price and included in the estimated future cash flows when computing the effective interest rate.

b) *Revised estimated future cash flows*

If the Bank revises its estimates of payments or receipts, the Bank adjusts the carrying amount of the financial instrument to reflect actual and revised estimated cash flows. The carrying amount is recalculated by computing the present value of estimated future cash flows at the financial instrument's original effective interest rate. The adjustment is recognised in profit or loss as income or expense. Thus the effective interest rate is kept constant.

Discount arising from the initial recognition of the acquired loans is included in the calculation of the effective interest rate and is amortised over the expected life of the financial instrument based on the difference between the calculated effective interest rate for a given period and the loan's coupon for that period.

Any revisions to estimated future cash flows subsequent to initial recognition, e.g. recovery of previously incurred credit losses, are recognised as part of the carrying amount of the financial asset with a corresponding amount recognised in profit or loss. Revisions to the estimated future cash flows are recognised immediately in profit or loss in the accounting period when the change in estimate was made.

Upwards changes in estimated future cash flows are first recognised as a reversal of incurred impairment losses. The remaining balance is recognised as income from revised estimated future cash flows from loans. Downwards revisions to estimated future cash flows are recognised as impairment (see note 11).

c) *Revaluation of loans and receivables*

Significant part of the loan portfolio that was previously valued in homogeneous pools was now valued on a case-by-case basis following the specific impairment process. The expected recoverable amount of the remaining loans in the homogeneous pools was reassessed after the impairment process.

The revaluation of loans to large corporate borrowers was based on the same assumptions as used in the initial valuation of the acquired portfolio. Subsequent changes in estimated future cash flows relate to changes in present value of collaterals.

Notes to the Consolidated Financial Statements

2.5 Cont'd

The Bank has split its portfolio into three main groups:

- 1) The Black Book contains loans with specific impairment and deep discount loans that are individually assessed
- 2) The Red Book contains loans and receivables acquired at a deep discount assessed on a portfolio basis
- 3) The White Book contains performing loans with adequate collateral, at acceptable rates e.g. new loans, restructured loans and loans transferred from the Red Book

The Black Book

At each balance sheet date the Bank assesses its loan portfolios for deterioration in the credit quality, taking into account all available information, including economic and market conditions on the reporting date. The evaluations are based on the creditworthiness on each individual borrower and loan. The assessment made is based upon the general financial conditions of the borrower and his ability to repay the loan, net worth and future prospects of the borrower, the financial conditions of any guarantors as well as the expected market value of the underlying collateral or other risk mitigating factors.

The Red Book (homogeneous pools)

The book value of the homogeneous pools in the red book is affected by two different processes. The first process is a dynamic calculation which is done each month based on changes that have been made to loans in the pool. These changes include write-offs, down payments, and transfers to either the black or the white book.

For example, when a loan in the red book is specifically impaired, it is transferred to the black book and appropriate impairment and discount are taken from the collective buffers available in the red book. If the loan is assigned a higher impairment than the average red book loan, this will lead to an increase in the book value of the remaining loans. A loan that is re-paid, on the other hand, will leave all its impairment behind in the red book which will lead to a decrease in the book value of the remaining loans. This process changes the book value of the red book but does not lead to any profit or loss.

In addition, at year end, the recoverable amount of loans in the Red Book was reassessed. The main reason for why it was important to reassess the remaining loans at this point in time is that a substantial part of the exposure was transferred to the Black Book following the specific impairment process.

The White Book

Provision for latent impairment losses reflects losses that have been incurred but not identified in the reporting period. The group of loans that make the basis for the collective allowance are all loans that are not specifically impaired.

Loans to banks and financial institutions and loans in repo deals are not contributing to the general allowance, since it is the Bank's opinion that all incurred losses on these types of loans have already been identified as at 31 December 2010. The incurred but not yet identified loss for other types of loans is found using a formula that depends on risk class and loss given default.

d) Impairment of foreign exchange gains

Part of the loan book are loans in foreign currencies to borrowers with ISK revenue and cash flow. The foreign exchange gain or loss on these loans is realised as net financial income. The Bank does not expect to recover foreign exchange gain relating to these loans and the foreign exchange gain is therefore fully impaired. If, in a subsequent period, the Bank incurs a foreign exchange loss, previous impairment of foreign exchange gain is reversed.

Critical assumptions used in the initial valuation are discussed in detail in the Bank's Consolidated financial statements 2009.

Notes to the Consolidated Financial Statements

3. Significant accounting policies

3.1 The accounting policies set out below have been applied consistently by the Bank's entities.

Basis of consolidation

a) *Subsidiaries*

Subsidiaries are entities controlled by the Bank. Control exists when the Bank has the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. Control usually exists when the Bank holds more than 50% of the voting power of the subsidiaries. In assessing control, potential voting rights that are currently exercisable or convertible, if any, are taken into account. The financial statements of subsidiaries are included in the consolidated financial statements from the date that control commences until the date that control ceases. The financial statements have been prepared using uniform accounting policies for like transactions and other events in similar circumstances.

The purchase method of accounting is used to account for the acquisition of subsidiaries and other businesses by the Bank. The cost of an acquisition is measured as the fair value, at the date of exchange, of the assets given, liabilities incurred or assumed, and equity instruments issued, plus cost directly attributable to the acquisition. Identifiable assets acquired and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair value at the acquisition date, irrespective of the extent of any minority interest, except for non-current assets (or disposal groups) that are classified as held for sale in accordance with IFRS 5 Non-current Assets Held for Sale and Discontinued Operations, which are recognised at the lower of its carrying amount and fair value less costs to sell. The excess of the cost of acquisition over the fair value of the Bank's share of the identifiable net assets acquired is recorded as goodwill. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognised immediately as income in the statement of comprehensive income.

b) *Non-controlling interests*

Non-controlling interests represent the portion of profit or loss and net assets not owned, directly or indirectly, by the Bank and are presented separately in the statement of comprehensive income and within equity in the consolidated balance sheet, separately from the equity attributable to equity holders of Íslandsbanki hf. Disposals to non-controlling interests result in gains and losses for the Bank that is recorded in the statement of comprehensive income.

c) *Special purpose entities*

Special purpose entities are entities that are created to accomplish a narrow and well-defined objective such as the securitisation of particular assets, or the execution of a specific borrowing or lending transaction. The Financial Statements of special purpose entities are included in the Bank's Consolidated Financial Statements where the substance of the relationship is that the Bank controls the special purpose entity.

d) *Associates*

Associates are those entities over which the Bank has significant influence, which is the power to participate in the financial and operating policy decisions of the associates but is not control or joint control over those policies. Significant influence generally exists when the Bank holds between 20% and 50% of the voting power, including potential voting rights, if any.

Investments in associates are accounted for using the equity method and are initially recognised at cost. The investments include goodwill identified on acquisition, net of any accumulated impairment losses. The carrying amount of the investments is adjusted for post-acquisition changes in the Bank's share of net assets of the associates and for impairment losses, if any. Therefore, the consolidated financial statements include the Bank's share of the total recognised gains and losses of associates, from the date that significant influence commences until the date that significant influence ceases. When the Bank's share of losses exceeds its interest in the associate, the carrying amount of that associate is reduced to nil and recognition of further losses is discontinued except to the extent that the Bank has incurred legal or constructive obligations or made payments on behalf of the associate. If the associate subsequently reports profits, the Bank resumes recognising its share of profits only after its share of profits equals the share of losses not recognised.

Notes to the Consolidated Financial Statements

3.1 Cont'd

e) *Funds management*

The Bank manages and administers assets held in unit trusts and other investment vehicles on behalf of investors. The financial statements of these entities are not included in these consolidated financial statements except when the Bank controls the entity.

f) *Transactions eliminated on consolidation*

Intragroup balances, and any unrealised gains and losses or income and expenses arising from intrabank transactions, are eliminated in preparing the consolidated financial statements. Unrealised gains arising from transactions with associates and jointly controlled entities are eliminated to the extent of the Bank's interest in them. Unrealised losses are eliminated in the same way as unrealised gains, but only to the extent that there is no evidence of impairment.

3.2 Business combinations

Acquisitions of subsidiaries and businesses are accounted for using the acquisition method. The consideration for each acquisition is measured as the aggregate of the fair values (at the date of exchange) of assets given, liabilities incurred or assumed, and equity instruments issued by the Group in exchange for control of the acquiree. Acquisition-related costs are recognised in profit or loss as incurred.

Where applicable, the consideration for the acquisition includes any asset or liability resulting from a contingent consideration arrangement, measured at its acquisition-date fair value. Subsequent changes in such fair values are adjusted against the cost of acquisition where they qualify as measurement period adjustments. All other subsequent changes in the fair value of contingent consideration classified as an asset or liability are accounted for in accordance with relevant IFRSs. Changes in the fair value of contingent consideration classified as equity are not recognised.

Where a business combination is achieved in stages, the Group's previously held interests in the acquired entity are revalued to fair value at the acquisition date (i.e. the date the Group attains control) and the resulting gain or loss, if any, is recognised in profit or loss. Amounts arising from interests in the acquiree prior to the acquisition date that have previously been recognised in other comprehensive income are reclassified to profit or loss, where such treatment would be appropriate if that interest were disposed of.

The acquiree's identifiable assets, liabilities and contingent liabilities that meet the conditions for recognition under IFRS 3 are recognised at their fair value at the acquisition date, except that:

- deferred tax assets or liabilities and liabilities or assets related to employee benefit arrangements are recognised and measured in accordance with IAS 12 Income Taxes and IAS 19 Employee Benefits respectively;
- liabilities or equity instruments related to the replacement by the Group of an acquiree's share-based payment awards are measured in accordance with IFRS 2 Share-based Payment;
- assets (or disposal groups) that are classified as held for sale in accordance with IFRS 5 Non-current Assets Held for Sale and Discontinued Operations are measured in accordance with that standard.

If the initial accounting for a business combination is incomplete by the end of the reporting period in which the combination occurs, the Bank reports provisional amounts for the items for which the accounting is incomplete. Those provisional amounts are adjusted during the measurement period, or additional assets or liabilities are recognised, to reflect new information obtained about facts and circumstances that existed as of the acquisition date that, if known, would have affected the amounts recognised as of that date.

The measurement period is the period from the date of acquisition to the date the Bank obtains complete information about facts and circumstances that existed as of the acquisition date – and is subject to a maximum of one year.

Notes to the Consolidated Financial Statements

3.3 Foreign currencies

a) *Foreign currency transactions*

Items included in the financial statements of each of the Bank's entities are measured using the functional currency of the respective entity. Transactions in foreign currencies are translated into functional currencies at the foreign exchange rate prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies at the balance sheet date are retranslated into functional currencies at the foreign exchange rate prevailing at that date. Non-monetary assets and liabilities that are measured in terms of historical cost in a foreign currency are translated using the exchange rate at the date of the transaction. Non-monetary assets and liabilities denominated in foreign currencies that are measured at fair value are retranslated into the functional currency at the spot exchange rate at the date that the fair value was determined. Foreign currency differences arising on retranslation are recognised in profit or loss.

b) *Foreign operations*

The assets and liabilities of foreign operations, including goodwill and fair value adjustments arising on consolidation, are translated to the presentation currency, Icelandic krona (ISK), at foreign exchange rates prevailing at the balance sheet date. The revenues and expenses of foreign operations are translated to Icelandic krona at rates approximating the foreign exchange rates ruling at the dates of the transactions. Foreign exchange differences arising on translation are recognised directly in the translation reserve in equity. When a foreign operation is disposed of, in part or in full, the relevant amount in the translation reserve is transferred from equity and recognised in the statement of comprehensive income as part of the gain or loss on sale.

3.4 Financial assets

For the purpose of measurement, the Bank classifies its financial assets in the following categories: financial assets held for trading, financial assets designated at fair value through profit or loss, loans and receivables, and available-for-sale financial assets. Management determines the classification of financial assets at initial recognition.

a) *Financial assets held for trading*

Financial assets held for trading are financial assets acquired principally for the purpose of selling or repurchasing in the near term, or for holding as part of a portfolio that is managed together for short-term profit or position taking. Financial assets held for trading consist of bonds and debt instruments, shares and equity instruments, and derivatives with positive fair value which are not designated as hedging instruments.

Financial assets held for trading are initially recognised and subsequently measured at fair value in the balance sheet with transaction costs taken directly to profit or loss. Changes in fair value are recognised in the statement of comprehensive income in "Net financial income", except for interest earned, which is recognised as "Interest income" on an accrual basis.

b) *Financial assets designated at fair value through profit or loss*

The Bank classifies certain financial assets upon their initial recognition as financial assets at fair value through profit or loss when doing so results in more relevant information because:

- it eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases; or
- financial assets and/or financial liabilities are managed and their performance is evaluated on a fair value basis, in accordance with the Bank's risk management or investment strategy, and information about it is provided internally on that basis to the Bank's key management personnel.

Assets classified according to the above-mentioned conditions consist of:

- fixed interest rate loans originated by the Bank whose fixed interest has been swapped into floating by entering into corresponding interest rate swaps;
- debt and equity instruments which are acquired by the Bank with a view to profiting from their total return and which are managed and evaluated on a fair value basis.

Financial assets designated at fair value through profit or loss are initially recognised and subsequently measured at fair value in the balance sheet with transaction costs taken directly to profit or loss. Changes in fair value are recognised in the statement of comprehensive income in "Net financial income", except for interest earned, which is recognised as "Interest income" on an accrual basis.

Notes to the Consolidated Financial Statements

3.4 Cont'd

c) *Loans and receivables*

Loans and receivables are non-derivative financial instruments with fixed or determinable payments that are not quoted in an active market and that the Bank does not intend to sell immediately or in the near term, other than those that the Bank designates upon initial recognition as financial assets at fair value through profit or loss. Loans and receivables include loans originated by the Bank to other banks and to its customers, participations in loans from other lenders and purchased loans.

Loans and receivables are recognised when cash is advanced to borrowers. They are measured at fair value on initial recognition, which is the cash given to originate the loan, including any transaction costs, and subsequently are measured at amortised cost using the effective interest method, less allowance for impairment. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees and costs that are an integral part of the effective interest rate. Accrued interest is included in the carrying amount of the loans and receivables in the balance sheet. This is disclosed in more detail in note 2.5.

Gains and losses on loans and receivables are recognised in the statement of comprehensive income in 'Interest income' and 'Interest expense' when the loans and receivables are derecognised and in 'Currency exchange difference' when the loans and receivables are re-measured for foreign exchange differences. The losses arising from impairment are recognised in the statement of comprehensive income in "Net interest income after valuation changes on loans and receivables".

d) *Financial assets available-for-sale*

Financial assets available-for-sale are non-derivative investments which the Bank designates as such or are not classified as loans and receivables, financial assets held for trading or financial assets designated at fair value through profit or loss. Financial assets available-for-sale consist of debt instruments held by the Bank for long-term investment purposes.

Financial assets available-for-sale are initially recognised at fair value plus transaction costs, and subsequently are carried at fair value. Changes in fair value are initially recognised directly in equity, net of income taxes. The cumulative changes in fair value recognised in equity are transferred to the statement of comprehensive income in "Net financial income" when the financial assets are derecognised or impaired. Gains and losses on derecognition are determined using the average cost method.

Interest earned on financial assets classified as available-for-sale is recognised in statement of comprehensive income in "Interest income" using the effective interest method. Foreign exchange gains and losses on monetary financial assets classified as available-for-sale are recognised in statement of comprehensive income in "Net financial income". Dividends on available-for-sale equity instruments are recognised in statement of comprehensive income in "Net financial income" when the Bank's right to receive payment is established. The losses arising from impairment of financial assets classified as available-for-sale are recognised in statement of comprehensive income in "Net impairment losses on financial assets".

Reclassification of Held for Trading and Available for Sale financial assets that meet the definition of loans and receivables may be reclassified to loans and receivables if the Bank has the intention and ability to hold the financial asset for the foreseeable future or until maturity. Additionally, Held for trading financial assets that do not meet the definition of loans and receivables may, in rare circumstances, be transferred to Available for sale financial assets or to Held to Maturity investments.

Notes to the Consolidated Financial Statements

3.5 Financial liabilities

For the purpose of measurement, the Bank classifies its financial liabilities in the following categories: financial liabilities held for trading, financial liabilities designated at fair value through profit or loss, and financial liabilities measured at amortised cost. Management determines the classification of financial liabilities at initial recognition.

a) *Financial liabilities held for trading*

Financial liabilities held for trading are financial liabilities incurred principally for the purpose of generating profits from short-term price fluctuations or from the dealer's margin. Financial liabilities held for trading consist of short position in equity and bond instruments, and derivatives with negative fair value which are not classified as financial guarantees or are not designated as hedging instruments.

Financial liabilities held for trading are initially recognised and subsequently measured at fair value in the balance sheet with transaction costs taken directly to profit or loss. Changes in fair value are recognised in the statement of comprehensive income in "Net financial income", except for interest incurred, which is recognised as "Interest expense" on an accrual basis.

b) *Financial liabilities designated at fair value through profit or loss*

The Bank classifies certain financial liabilities upon their initial recognition as financial liabilities at fair value through profit or loss when doing so results in more relevant information because:

- it eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different basis; or
- financial assets and/or financial liabilities are managed and their performance is evaluated on a fair value basis, in accordance with the Bank's risk management or investment strategy, and information about it is provided internally on that basis to the Bank's key management personnel.

Liabilities classified according to the above-mentioned conditions consist of:

- fixed rate deposits and fixed interest rate debt issued by the Bank whose fixed interest has been swapped into floating by entering into corresponding interest rate swaps;
- structured notes which are managed and evaluated on a fair value basis.

Financial liabilities designated at fair value through profit or loss are initially recognised and subsequently measured at fair value in the balance sheet with transaction costs taken directly to profit or loss. Changes in fair value are recognised in the statement of comprehensive income in "Net financial income", except for interest incurred, which is recognised as "Interest expense" on an accrual basis.

c) *Financial liabilities measured at amortised cost*

Financial liabilities measured at amortised cost are non-derivative financial liabilities which are not classified as financial liabilities held for trading or financial liabilities designated at fair value through profit or loss. Financial liabilities measured at amortised cost include deposits, debt issued and other borrowed funds and subordinated loans.

Financial liabilities measured at amortised cost are recognised initially at fair value net of transaction costs incurred, and subsequently are carried at amortised cost using the effective interest method. Amortised cost is calculated by taking into account any discount or premium on the issue and fees and costs that are an integral part of the effective interest rate. Accrued interest is included in the carrying amount of the liabilities in the balance sheet.

Notes to the Consolidated Financial Statements

3.6 Determination of fair value of financial assets and financial liabilities

A number of the Bank's accounting policies and disclosures require the determination of fair value for measurement and/or disclosure purposes. Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction at the reporting date.

The determination of fair value of financial assets and financial liabilities that are quoted in an active market is based on quoted prices. If a market for a financial instrument is not active, the Bank establishes fair value using valuation techniques. A market is considered active if quoted prices are readily and regularly available and those prices represent actual and regularly occurring market transactions on an arm's length basis. For all other financial instruments fair value is determined by using valuation techniques.

Valuation techniques include recent arm's length transactions between knowledgeable, willing parties, if available, reference to the current fair value of other instruments that are substantially the same, the discounted cash flow analysis and option pricing models. Valuation techniques incorporate all factors that market participants would consider in setting a price and are consistent with accepted methodologies for pricing financial instruments. Periodically, the Bank calibrates the valuation technique and tests it for validity using prices from any observable current market transactions in the same instrument, without modification or repackaging, or based on any available observable market data.

For more complex financial instruments, the Bank uses proprietary models, which usually are developed from recognised valuation models. Some or all of the inputs into these models may not be market observable, in which case the inputs are derived from market prices or rates or estimated based on assumptions. The value produced by a model or other valuation technique is adjusted to allow for a number of factors as appropriate, because valuation techniques cannot appropriately reflect all factors market participants take into account when entering into a transaction. Valuation adjustments are recorded to allow for model risks, bid-ask spreads, liquidity risks, as well as other factors. Management believes that these valuation adjustments are necessary and appropriate to fairly state financial instruments carried at fair value on the balance sheet.

The best evidence of the fair value of a financial instrument at initial recognition is the transaction price unless the fair value of that instrument is evidenced by comparison with other observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on a valuation technique whose variables include only data from observable markets. When such evidence exists, the Bank recognises the difference between the transaction price and fair value in the statement of comprehensive income in "Net financial income" on initial recognition of the financial instrument. In cases where use is made of data which is not from observable markets, the difference between the transaction price and the value produced by the valuation technique, if any, is recognised in the statement of comprehensive income in "Net financial income", depending upon individual facts and circumstances of each transaction and not later than when the data becomes observable.

Notes to the Consolidated Financial Statements

3.7 Recognition and derecognition of financial assets and financial liabilities

The Bank uses trade date accounting to recognise purchases and sales of financial assets, i.e. they are recognised on the date on which the Bank commits to purchase or sell the asset, except for loans, which are recognised on the date when cash is advanced to the borrowers. For a financial asset purchased, the Bank recognises on the trade date a financial asset to be received and a financial liability to pay. For a financial asset sold, the Bank derecognises the asset on the trade date, recognises any gains or losses on disposal and recognises a receivable from the buyer.

The Bank derecognises financial assets when the contractual rights to the cash flows from the financial assets expire or when the Bank transfers the rights to receive the contractual cash flows on the financial asset in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred. Any interest in transferred financial assets that is created or retained by the Bank is recognised as a separate asset or liability.

The Bank recognises financial liabilities held for trading and financial liabilities designated at fair value through profit or loss on the trade date at which the Bank becomes a party to the contractual provisions of the financial instrument. The Bank recognises financial liabilities measured at amortised cost on the date when they are originated. The Bank derecognises a financial liability when its contractual obligations are discharged or cancelled or expire.

The Bank enters into transactions whereby it transfers assets recognised on its balance sheet, but retains either all risks and rewards of the transferred assets or a portion of them. If all or substantially all risks and rewards are retained, then the transferred assets are not derecognised from the balance sheet. Transfers of assets with retention of all or substantially all risks and rewards include, for example, repurchase transactions and securities lending.

The Bank does not derecognise from the balance sheet securities which the Bank sells under agreements to repurchase at a specified future date ("repos") at a fixed price or at the sale price plus a lender's return. The Bank recognises the cash received as a liability on its balance sheet. The difference between the sale and repurchase prices is recognised as interest expense over the life of the agreement using the effective interest rate method.

Securities lending and borrowing transactions are usually collateralised by securities or cash. The transfer of securities to counterparties is only reflected on the balance sheet if the risks and rewards of ownership are also transferred. Cash advanced or received as collateral is recorded as an asset or liability.

3.8 Offsetting financial assets and financial liabilities

Financial assets and liabilities are offset and the net amount reported in the balance sheet when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the asset and settle the liability simultaneously.

3.9 Derivative financial instruments

The Bank uses derivatives for trading. Derivatives which do not classify as equity instruments of the Bank are classified as financial assets or financial liabilities, measured at fair value and presented in the balance sheet as assets or liabilities, depending on whether their fair value at the balance sheet date is positive (assets) or negative (liabilities).

The method of recognising changes in fair value of derivatives depends on whether the derivatives are designated as hedging instruments, and if so, the nature of the item being hedged. Derivatives which the Bank does not designate or are not effective hedging instruments are classified as financial asset or financial liabilities held for trading and are accounted for in accordance with note 3.4(a) and 3.5(a).

Notes to the Consolidated Financial Statements

3.10 Leases

The Bank classifies leases based on the extent of the transfer of risks and rewards incidental to ownership of leased assets. A lease is classified as operating lease if the lessor does not transfer substantially all the risks and rewards incidental to ownership. A lease is classified as a finance lease if the lessor transfers substantially all the risks and rewards incidental to ownership.

a) *Operating leases*

Lease payments under operating leases where the Bank is the lessee are recognised as an expense on a straight-line basis over the lease term.

b) *Finance leases*

Finance leases are initially recognised at an amount equal to the net investment in the lease and subsequent lease payments are applied against the gross investment in the lease to reduce both the principal and the unearned finance income.

The Bank recognises its finance income as interest income based on a pattern reflecting a constant periodic rate of return on the Bank's net investment in the finance lease. The interest rate implicit in the lease is defined in such a way that the initial direct costs are included automatically in the finance lease receivable and therefore the initial direct costs are recognised over the lease term.

Where the Bank is part of an arrangement in the legal form of a lease, which in substance does not involve a lease, lease accounting is not applied and the lease agreement is classified as loans and receivables.

3.11 Investment property

The Bank holds certain properties as investments to earn rental income, for capital appreciation or both. Investment property is measured initially at cost, including transaction costs. Subsequently, investment property is measured at fair value, which reflects market conditions at the balance sheet date. Changes in the fair values are included in the statement of comprehensive income in "Other net operating income".

3.12 Property and equipment

a) *Owned assets*

Items of property and equipment are measured at cost less accumulated depreciation and impairment losses, according to the cost model in IAS 16.

Where parts of an item of property and equipment have different useful lives, those components are accounted for as separate items of property and equipment.

b) *Subsequent costs*

The Bank recognises in the carrying amount of an item of property and equipment the cost of replacing part of such an item when that cost is incurred if it is probable that the future economic benefits embodied with the item will flow to the Bank and the cost of the item can be measured reliably. The decision if subsequent costs is added to the acquisition cost of the property or equipment, is based on whether an identified component, or part of such component, has been replaced or not, or if the nature of the subsequent cost means a contribution of a new component. All other costs are recognised in the statement of comprehensive income as an expense as incurred.

c) *Depreciation*

The depreciable amount of property and equipment is determined after deducting its residual value. Depreciation is charged to the statement of comprehensive income on a straight-line basis over the estimated useful lives of each part of an item of property and equipment. The estimated useful lives are as follows:

Buildings	50 years
Fixtures	6 - 12 years
Machinery and equipment	4 years
Vehicles	3 years

The residual value is reassessed annually.

Notes to the Consolidated Financial Statements

3.13 Intangible assets

a) *Goodwill*

Where goodwill arises it is recognised as an asset in relation to the acquisition of businesses, for example through purchase of shares in subsidiaries or net assets of another entity. Goodwill relating to acquisition of associates is not recognised separately as an asset but is included in the carrying amount of the investments in associates in the balance sheet.

All business combinations are accounted for by applying the purchase method. In this respect, goodwill represents the difference between the cost of the acquisition and the fair value of the net identifiable assets acquired.

Goodwill is measured at cost less any accumulated impairment losses. Goodwill is allocated to cash-generating units and is tested for impairment annually and whenever there is an indication that the unit may be impaired.

Expenditure on internally generated goodwill and brands is recognised in the statement of comprehensive income as an expense as incurred.

b) *Other intangible assets*

Intangible assets other than goodwill that are acquired by the Bank are measured at cost less accumulated amortisation and impairment losses.

c) *Subsequent expenditure*

Subsequent expenditure on capitalised intangible assets other than goodwill is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditure is expensed as incurred.

d) *Amortisation*

Amortisation is charged to the statement of comprehensive income on a straight-line basis over the estimated useful lives of intangible assets. The Bank ascertained that the estimated useful life of software is four years. Goodwill is not amortised but it is systematically tested for impairment. Other intangible assets are amortised from the date they are available for use.

3.14 Non-current assets and disposal groups held for sale

Non-current assets (or disposal groups comprising assets and liabilities), including non-current assets (or disposal groups) acquired in a business combination, are classified as held for sale if the Bank expects to recover their carrying amount principally through a sale transaction rather than through continuing use. For this to be the case, the assets (or disposal groups) must be available for immediate sale in their present condition subject only to terms that are usual and customary for sales of such assets (or disposal groups) and their sale must be highly probable. Immediately before classification as held for sale, the measurement of all assets and liabilities in a disposal group is measured in accordance with the Bank's applicable accounting policies, except for non-current assets (or disposal groups) acquired in a business combination that are classified as held for sale, which are recognised at fair value less costs to sell. Thereafter, generally the assets and disposal groups classified as held for sale are measured at the lower of carrying amount and fair value less costs to sell.

Impairment losses on initial classification as held for sale and subsequent gains or losses on remeasurement are recognised in the statement of comprehensive income. Gains are not recognised in excess of any cumulative impairment losses.

Non-current assets and disposal groups held for sale are mainly foreclosed mortgages and subsidiaries held exclusively with a view to subsequent disposal.

3.15 Financial guarantees

Financial guarantees are contracts that require the Bank to make specified payments to reimburse the holder for a loss incurred because a specified debtor fails to make payments when due, in accordance with the terms of a debt instrument.

Financial guarantees are initially measured at fair value, being the premium received. Subsequently, the Bank's liability under each guarantee is measured at the higher of the amortised premium and the best estimate of the expenditure required to settle any financial obligation arising as a result of the guarantee at the balance sheet date. The estimates are determined based on experience of similar transactions and history of past losses, supplemented by the judgement of management. Financial guarantees are recognised in the financial statements when they are issued and included within "Other liabilities".

Any increase in the liability relating to financial guarantees is recognised in the consolidated statement of comprehensive income under "Other net operating income". The premium received is amortised on a straight line basis over the life of the guarantee and recognised in the consolidated statement of comprehensive income under "Net fees and commission income".

Notes to the Consolidated Financial Statements

3.16 Provisions

Provisions are recognised when the Bank has a present obligation (legal or constructive) as a result of a past event, it is possible that the Bank will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation at the balance sheet date, taking into account the risks and uncertainties surrounding the obligation. Where a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows.

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, the receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

a) *Onerous contracts*

Present obligations arising under onerous contracts are recognised and measured as provisions. An onerous contract is considered to exist where the Bank has a contract under which the unavoidable costs of meeting the obligations under the contract exceeds the economic benefits expected to be received under it.

b) *Restructuring*

A restructuring provision is recognised when the Bank has developed a detailed formal plan for the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement the plan or announcing its main features to those affected by it. The measurement of a restructuring provision includes only the direct expenditures arising from the restructuring, which are those amounts that are both necessarily entailed by the restructuring and not associated with the ongoing activities of the entity.

c) *Contingent liabilities acquired in a business combination*

Contingent liabilities acquired in a business combination are initially measured at fair value at the date of acquisition.

At subsequent reporting dates, such contingent liabilities are measured at the higher of the amount that would be recognised in accordance with IAS 37 Provisions, contingent liabilities and contingent assets and the amount initially recognised less cumulative amortisation recognised in accordance with IAS 18 Revenue.

3.17 Subordinated loans

Subordinated loans are financial liabilities of the Bank which consist of liabilities in the form of subordinated loan capital which, in case of the Bank's voluntary or compulsory winding-up, will not be repaid until after the claims of ordinary creditors have been met. In the calculation of the capital ratio, the bonds are included within Tier I and Tier II, as shown in Note 83. Subordinated loans with no maturity date that the Bank may retire only with the permission of the Financial Supervisory Authority (FME) these loans qualify as Tier I capital in the calculation of the equity ratio.

3.18 Share capital

a) *Share capital*

The Bank has one class of ordinary shares which carry no right to fixed income.

b) *Dividends on shares*

Dividends are recognised as a deduction to equity in the period in which they are approved by the Bank's shareholders. Dividends declared after the balance sheet date are not recognised as a liability at the balance sheet date.

Notes to the Consolidated Financial Statements

3.19 Cash and cash equivalents

Cash and cash equivalents in the consolidated statement of cash flows consist of cash in hand, treasury bills, demand deposits with the Central Banks and with other credit institutions, short term loans to credit institutions and other liquid debt securities at floating interest rates. Cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, and are used by the Bank in the management of its short-term commitments.

3.20 Interest income and expense

For all financial assets and financial liabilities measured at amortised cost and for debt instruments classified as financial assets available-for-sale (see notes 3.4 and 3.5), interest income and expense is recognised in the statement of comprehensive income using the effective interest method. For all financial assets and financial liabilities held for trading and for all financial assets and liabilities designated at fair value through profit or loss (see notes 3.4 and 3.5), interest income and expense is recognised in the statement of comprehensive income on an accrual basis (see note 10).

The effective interest method is a method of calculating the amortised cost of a financial asset or a financial liability (or group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or a shorter period, when appropriate, to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows, considering all contractual terms of the financial instrument, but does not consider future credit losses. The calculation generally includes all fees and amounts paid or received between parties to the contract that are an integral part of the effective interest rate, as well as transaction costs and all other premiums or discounts.

The effective interest rate is established on initial recognition of financial assets and financial liabilities and their carrying amount is subsequently adjusted if the Bank revises its estimates of payments or receipts. The adjusted carrying amount is calculated based on the original effective interest rate (i.e. the effective interest rate established at initial recognition) and the change in carrying amount is recorded as interest income or expense. For floating rate instruments, interest income or expense is generally recognised based on the current market rate plus or minus amortisation or accretion of the discount or premium based on the original effective interest rate. Interest on impaired financial assets is calculated by applying the original effective interest rate of the financial asset to the carrying amount as reduced by any allowance for impairment.

Interest income and expense include gains and losses on derecognition of loans and receivables and financial liabilities measured at amortised cost.

3.21 Net valuation changes on loans and receivables

Net valuation changes on loans and receivables is the net amount realised in the income statement following a revaluation of the Bank's loan assets held at deep discount. It is made up of income due to revised estimated future cash flows from loans (see note 2.5 b), individually and collectively assessed impairment (see note 35), but excludes impairment or impairment loss reversal of foreign exchange gain from customers with cash flows in ISK (see note 2.5 d).

Provision for latent impairment losses reflects impairment losses that have been incurred but not identified in the reporting period (see note 2.5 c).

Notes to the Consolidated Financial Statements

3.22 Impairment

The carrying amount of the Bank's assets, other than tax assets and financial assets measured at fair value with changes recognised in the statement of comprehensive income is reviewed at each balance sheet date to determine whether there is any indication of impairment. If any such indication exists, the asset's recoverable amount is estimated. An impairment loss is recognised in the statement of comprehensive income whenever the carrying amount of an asset or of a cash-generating unit exceeds its recoverable amount.

A financial asset or a group of financial assets is impaired and impairment losses are incurred if, and only if, there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated. It may not be possible to identify a single, discrete event that caused the impairment. Rather the combined effect of several events may have caused the impairment. Losses expected as a result of future events, no matter how likely, are not recognised.

a) *Impairment on loans and receivables*

If there is objective evidence that an impairment loss has been incurred on loans and receivables, their carrying amount is reduced through the use of an allowance account to the present value of expected future cash flows, discounted at their original effective interest rate. Losses expected as a result of future events, no matter how likely, are not recognised.

The criteria that the Bank uses to determine that there is objective evidence of an impairment loss include:

- Delinquency in contractual payments of principal or interest;
- Cash flow difficulties experienced by the borrower (for example, equity ratio, net income percentage of sales);
- Breach of loan covenants or conditions;
- Initiation of bankruptcy proceedings;
- Deterioration of the borrower's competitive position;
- Deterioration in the value of collateral;
- Downgrading of an asset.

If, in a subsequent period, the amount of an impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed to the extent it is now excessive by reducing the loan impairment allowance account. The amount of any reversal is recognised in the statement of comprehensive income.

The Bank's management first assesses whether objective evidence of impairment exists individually for financial assets that are individually significant. Loans and receivables that are not impaired individually become a part of a portfolio which is assessed for impairment. Collective assessment based on a portfolio assumes that loans and receivables have similar credit risk characteristics. Objective evidence of impairment of a group of loans and receivables exists if objective data indicates a decrease in expected future cash flows from a portfolio of loans and the decrease can be measured reliably but cannot be identified with the individual loans in the portfolio.

The recognition of interest income on impaired loans and receivables is recognised using the rate of interest used to discount the future cash flows for the purpose of measuring impairment losses.

b) *Impairment on goodwill*

The Bank assesses whether there is any indication of impairment of goodwill on an annual basis. Goodwill is tested for impairment. Gains or losses realised on the disposal of subsidiaries include any unamortised balances of goodwill relating to the subsidiary disposed of.

Notes to the Consolidated Financial Statements

3.22 Cont'd

c) *Impairment on financial assets available-for-sale*

The Bank determines that available-for-sale equity investments are impaired when there has been a significant or prolonged decline in the fair value below its cost. This determination of what is significant or prolonged requires judgement. In making this judgement, the Bank evaluates among other factors, the normal volatility in share price. In addition, impairment may be appropriate when there is evidence of deterioration in the financial strength of the investee, industry and sector performance, changes in technology, and operational and financing cash flows. The amount of impairment loss is recognised in the statement of comprehensive income.

d) *Calculation of recoverable amount*

The recoverable amount of the Bank's loans and receivables is calculated as the present value of estimated future cash flows. The discount rate used for fixed rate loans and receivables is the effective interest rate computed at initial recognition. For variable rate loans and receivables the discount rate is the current effective interest rate.

The recoverable amount of other assets is the greater of their net selling price and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. For an asset that does not generate largely independent cash inflows, the recoverable amount is determined for the cash-generating unit to which the asset belongs.

Loan write-offs:

When a loan is uncollectible, it is written off against the related provision for loan impairment. Such loans are written off after all the necessary procedures have been completed and the amount of the loss has been determined.

e) *Reversals of impairment*

An impairment loss in respect of financial assets carried at amortised cost is reversed if the subsequent increase in recoverable amount can be related objectively to an event occurring after the impairment loss was recognised.

When a financial asset is acquired at a deep discount, credit losses have already occurred and are reflected in the purchase price. Such incurred credit losses are included in the estimated cash flows when computing the effective interest rate, as described in note 3.20. Any adjustments arising from revisions to estimated cash flows subsequent to initial recognition, e.g., recovery of previously incurred credit losses, are recognised as part of the carrying amount of the financial asset with a corresponding amount recognised in profit or loss.

An impairment loss in respect of an investment in a debt instrument classified as available-for-sale is reversed through the statement of comprehensive income while an impairment loss in respect of an investment in an equity instrument classified as available-for-sale is not reversed through statement of comprehensive income but through equity.

An impairment loss in respect of goodwill is not reversed.

In respect of other assets, an impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount.

An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised.

f) *Renegotiated loans*

Where possible, the Bank seeks to restructure loans rather than to take possession of collateral. This may involve extending the payment arrangements and the agreement of new loan conditions. Once the terms have been renegotiated, the loan is no longer considered past due. Management continuously reviews renegotiated loans to ensure that all criteria are met and that future payments are likely to occur. The loans continue to be subject to an individual or collective impairment assessment.

Notes to the Consolidated Financial Statements

3.23 Fee and commission income and expense

Fees and commissions are generally recognised on an accrual basis when the service has been provided.

Loan commitment fees for loans that are likely to be drawn down are deferred and recognised as an adjustment to the effective interest rate on the loan. When a loan commitment is not expected to result in the draw-down of a loan, loan commitment fees are recognised on a straight-line basis over the commitment period. Loan syndication fees are recognised as revenue when the syndication has been completed and the Bank has retained no part of the loan package for itself or has retained a part at the same effective interest rate as the other participants.

Commission and fees arising from negotiating, or participating in the negotiation of, a transaction for a third party – such as the arrangement of the acquisition of shares or other securities or the purchase or sale of businesses – are recognised on completion of the underlying transaction. Portfolio and other management advisory and service fees are recognised based on the applicable service contracts, usually on a time-apportionate basis. Asset management fees related to investment funds are recognised rateably over the period in which the service is provided. The same principle is applied for wealth management, financial planning and custody services that are continuously provided over an extended period of time. Performance-linked fees or fee components are recognised when the performance criteria are fulfilled.

Notes to the Consolidated Financial Statements

3.24 Net financial income

Net financial income consists of net gains on financial instruments held for trading, net gains on financial instruments designated at fair value through profit or loss and fair value adjustments in hedge accounting.

a) *Net gains on financial instruments held for trading*

Net gains on financial instruments held for trading comprise gains and losses related to financial assets and financial liabilities held for trading, and include all realised and unrealised fair value changes, except for interest (which is included in "Interest income" and "Interest expense") and foreign exchange gains and losses (which are included in "Net foreign exchange gains" as described below). Dividend income from financial assets held for trading is recognised in the statement of comprehensive income when the Bank's right to receive payment is established.

Gains and losses arising from changes in the fair value of derivatives that are classified as held for trading and which are economic hedges of financial assets or financial liabilities designated at fair value through profit or loss are included in "Net gains on financial instruments designated at fair value through profit or loss".

b) *Net gains on financial instruments designated at fair value through profit or loss*

Net gains on financial instruments designated at fair value through profit or loss comprise gains and losses related to financial assets and financial liabilities designated at fair value through profit or loss, and includes all realised and unrealised fair value changes, except for interest (which is included in "Interest income" and "Interest expense") and foreign exchange gains and losses (which are included in "Net foreign exchange gains" as described below). Dividend income from financial assets designated at fair value through profit or loss is recognised in the statement of comprehensive income when the Bank's right to receive payment is established.

Net gains on financial instruments designated at fair value through profit or loss also include gains and losses arising from changes in the fair value of derivatives that are classified as held for trading and which are economic hedges of financial assets or financial liabilities designated at fair value through profit or loss.

c) *Fair value adjustments in hedge accounting*

Fair value adjustments in hedge accounting comprises gains and losses arising from the entire change in fair value of hedging instruments in fair value hedges and gains and losses on hedged items attributable to the risks being hedged.

The Bank did not apply hedge accounting in 2010.

3.25 Net foreign exchange (loss) gain

Net foreign exchange (loss) gain comprises all foreign exchange differences arising on the settlement of foreign currency monetary assets and liabilities and on translating foreign currency monetary assets and liabilities at rates different from those at which they were translated on initial recognition during the period or in previous financial statements, except for differences arising on financial instruments designated as hedging instruments of net investments in foreign operations.

Net foreign exchange (loss) gain also includes foreign exchange differences arising on translating non-monetary assets and liabilities which are measured at fair value in foreign currencies and whose other gains and losses are also recognised in profit or loss.

On the face of the income statement, net foreign exchange (loss) gain is offset by impairment losses due to impairment of foreign exchange gain from loans in foreign currencies to borrowers with ISK revenue and cash flows, as the Bank does not expect to recover the foreign exchange gain on these loans.

Notes to the Consolidated Financial Statements

3.26 Income tax

Income tax on the profit or loss for the period comprises current and deferred tax. Income tax is recognised in the statement of comprehensive income except to the extent that it relates to items recognised directly in equity, in which case it is recognised in equity.

Current tax is the expected tax payable on the taxable income for the period, using tax rates enacted or substantially enacted at the balance sheet date, and any adjustment to tax payable in respect of previous years.

The deferred income tax asset / liability has been calculated and entered in the balance sheet. The calculation is based on the difference between balance sheet items as presented in the tax return on the one hand, and in the consolidated financial statements on the other, taking into consideration a carry forward tax loss. This difference is due to the fact that tax assessments are based on premises that differ from those governing the financial statements, mostly because revenues, especially of financial assets, are recognised earlier in the financial statements than in the tax return. A calculated tax asset is offset against income tax liability only if they are due to tax assessment from the same tax authorities.

A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

3.27 Bank tax

On December 2010 the government passed a new bill, 155/2010, implementing a non-deductible tax charge for credit institutions. The stated purpose of this tax is to create revenues for the government to meet the increased costs attributable to the insolvency of the Icelandic banks in October 2008. Furthermore, it is intended as a deterrent to increased risk appetite. The tax is calculated as 0.041% of the credit institution's total liabilities. The bank tax is shown in a separate line at the face of the statement of comprehensive income. The tax became effective for the tax year ended 31 December 2010.

3.28 Administrative expenses

Administrative expenses consist of salary and related expenses, depreciation of property and equipment, amortisation of intangible assets and other administrative expenses, such as housing costs, advertising expenses and IT-related expenses.

3.29 Segment reporting

A business segment is a group of assets and operations engaged in providing products or services that are subject to risk and return that are different from those of other business segments. The Bank is organised into six main business segments: Retail banking, Corporate banking, Markets, Wealth Management, Treasury and Midengi.

3.30 Initial application of new standards and amendments to standards which had an effect on the consolidated financial statements of the Bank

No initial application of new standards and amendments, which became effective for the Bank on 1 January 2010, had an effect on the consolidated financial statements of the Bank.

Notes to the Consolidated Financial Statements

3.31 New standards and amendments to standards which had no effect on the consolidated financial statements of the Bank

The following new standards and amendments which became effective on or after 1 January 2010 had no effect on the consolidated financial statements of the Bank:

- a) IFRIC 17 Distributions of Non-cash Assets to Owners, which establishes when and how a liability for certain distributions of non-cash assets to owners, acting in their capacity as owners, must be recognised and measured, and how to account for settlement of that liability. Distributions within the scope of IFRIC 17 must be measured at the fair value of the assets to be distributed. Any gain or loss on settlement of the liability for the dividend payable is recognised in profit or loss. The scope of IFRS 5 was expanded to include distributions of non-cash assets to owners.
- b) Amendments to IAS 39 Financial Instruments: Recognition and Measurement – Eligible Hedged Items, which clarify the application of existing principles that determine whether specific risks or portions of cash flows are eligible for designation in a hedging relationship.
- c) Amendments to IFRS 2 Share-based Payment – Group Cash-settled Share-based Payment Transactions, which requires an entity receiving goods or services (receiving entity) in either an equity-settled or a cash-settled share-based payment transaction to account for the transaction in its separate or individual financial statements. This principle applies also if another group entity or shareholder settles the transaction (settling entity) and the receiving entity has no obligation to settle the payment.
- d) Improvements to IFRSs (May 2008) – Amendments to IFRS 5 Non-current Assets Held for Sale and Discontinued Operations issued as part of the Improvements to IFRSs issued in May 2008, which clarify that an entity must classify all the assets and liabilities of a subsidiary as held for sale when the criteria set out in IFRS 5 are met and the entity is committed to a sale plan involving loss of control of a subsidiary, regardless of whether the entity retains a non-controlling interest in its former subsidiary after the sale. In addition, the entity has to disclose the information required in respect of discontinued operations if the subsidiary is a disposal group that meets the definition of a discontinued operation in accordance with IFRS 5.
- e) Improvements to IFRSs (April 2009), which consist of 15 amendments to 12 various standards related to the presentation, recognition, measurement or disclosures requirements of those standards.
- f) The Bank early adopted the revised IFRS 3 Business Combinations (2008) and the amendments to IAS 27 Consolidated and Separate Financial Statements (2008) in its consolidated financial statements for the year ended December 2008.

Notes to the Consolidated Financial Statements

3.32 New standards and amendments to standards adopted in advance by the Bank

The Bank did not early adopt any standards or amendments that became effective on or after 1 January 2011.

3.33 New standards and amendments to standards effective for the Bank for annual periods beginning on or after 1 January 2011 which have not been adopted in advance by the Bank

The following new standards and amendments to standards become effective for annual periods beginning on or after 1 January 2011 and have not been early adopted by the Bank:

- a) Improvements to IFRSs (May 2010), which contain the amendments to IFRS 3 Business Combinations, IFRS 7 Financial Instruments: Disclosures, IAS 1 Presentation of Financial Statements, IAS 27 Consolidated and Separate Financial Statements, IAS 34 Interim Financial Reporting and IFRIC 13 Customer Loyalty Programmes and consequential amendments to other IFRSs. If endorsed by the EU, these Improvements to IFRSs will become mandatory for the Bank's 2011 consolidated financial statements, with retrospective application generally required. These amendments are not expected to have a material impact on the consolidated financial statements of the Bank, except for the amendments to IFRS 7 which will require the Bank to disclose in the notes a quantification of the extent to which collateral and other credit enhancements mitigate credit risk arising from financial assets.
- b) Amendment to IAS 32 Financial Instruments: Presentation – Classification of Rights Issues. The IASB amended IAS 32 to allow rights, options or warrants to acquire a fixed number of an entity's own equity instruments for a fixed amount of any currency to be classified as equity instruments provided the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. The amendment to IAS 32 will become mandatory for the Bank's 2011 consolidated financial statements. The amendment must be applied retrospectively as it does not include any specific transitional provisions. The Bank is currently in the process of evaluating the possible impact of this amendment on its consolidated financial statements.
- c) IFRIC 19 Extinguishing Financial Liabilities with Equity Instruments, which addresses the accounting by an entity when the terms of its financial liabilities are renegotiated and result in the entity issuing equity instruments to its creditors to extinguish all or part of the financial liabilities. IFRIC 19 requires the entity to measure the equity instruments issued to its creditors to extinguish all or part of a financial liability at the fair value of the equity instruments issued, unless that fair value cannot be reliably measured, in which case the equity instruments issued must be measured to reflect the fair value of the financial liability extinguished. IFRIC 19 becomes mandatory for the Bank's 2011 consolidated financial statements, with retrospective application required. IFRIC 19 is not expected to have a material impact on the consolidated financial statements of the Bank.
- d) Amendments to IFRIC 14 IAS 19 – The Limit on a Defined Benefit Assets, Minimum Funding Requirements and their Interaction, which remove unintended consequences arising from the treatment of prepayments where there is a minimum funding requirement. These amendments result in prepayments of contributions in certain circumstances being recognised as an asset rather than an expense. These amendments will become mandatory for the Bank's 2011 consolidated financial statements, with retrospective application required. These amendments are not expected to have a material impact on the consolidated financial statements of the Bank.
- e) IAS 24 Related Party Disclosures (revised 2009), which amends the definition of a related party and provides a partial exemption to government-related entities from the general disclosure requirements in IAS 24. The revised IAS 24 will become mandatory for the Bank's 2011 consolidated financial statements, with retrospective application required. The Bank is currently in the process of evaluating the possible impact of the revised IAS 24 on its consolidated financial statements.
- f) Amendments to IAS 12 Income Taxes – Deferred Tax: Recovery of Underlying Assets introduce an exception to the current measurement principles of deferred tax assets and liabilities arising from investment property measured using the fair value model in accordance with IAS 40 Investment Property. The exception also applies to investment properties acquired in a business combination accounted for in accordance with IFRS 3 Business Combinations provided they are subsequently measured by applying the fair value model. In these specified circumstances the measurement of deferred tax liabilities and deferred tax assets should reflect a rebuttable presumption that the carrying amount of the underlying asset will be recovered entirely by sale. The presumption is rebutted only if the investment property is depreciable and held within a business model whose objective is to consume substantially all of the asset's economic benefits over the life of the asset. If endorsed by the EU, these amendments will become mandatory for the Bank's 2012 consolidated financial statements, with retrospective application required. The Bank is currently in the process of evaluating the possible impact of these amendments on its consolidated financial statements.

Notes to the Consolidated Financial Statements

3.33 Cont'd

g) Amendments to IFRS 7 Financial Instruments: Disclosures – Transfers of Financial Assets, which require disclosure of information that enables users of financial statements (i) to understand the relationship between transferred financial assets that are not derecognised in their entirety and the associated liabilities; and (ii) to evaluate the nature of, and risks associated with, an entity's continuing involvement in derecognised financial assets. If endorsed by the EU, these amendments will become mandatory for the Bank's 2012 consolidated financial statements, with earlier application permitted. Disclosures required by these amendments are not required for any periods presented that begin before the date of initial application of the amendments. The Bank is currently in the process of evaluating the possible impact of these amendments on its consolidated financial statements.

h) IFRS 9 Financial Instruments replaces those parts of IAS 39 Financial Instruments: Recognition and Measurement relating to the classification and measurement of financial assets and financial liabilities. The key features of IFRS 9 are the following:

- Financial assets are required to be classified into two measurement categories: those to be measured subsequently at fair value, and those to be measured subsequently at amortised cost. The decision is to be made at initial recognition. The classification depends on the entity's business model for managing its financial instruments and the contractual cash flow characteristics of the instrument.
- An instrument is subsequently measured at amortised cost only if it is a debt instrument and both the objective of the entity's business model is to hold the asset to collect the contractual cash flows, and the asset's contractual cash flows represent only payments of principal and interest. All other debt instruments are to be measured at fair value through profit or loss.

• All equity instruments are to be measured subsequently at fair value. Equity instruments that are held for trading will be measured at fair value through profit or loss. For all other equity investments, an irrevocable election can be made at initial recognition, to recognise unrealised and realised fair value gains and losses through other comprehensive income rather than profit or loss. There will be no recycling of fair value gains and losses to profit or loss. This election may be made on an instrument-by-instrument basis. Dividends are to be presented in profit or loss, as long as they represent a return on investment.

• Derivatives embedded in contracts with a host that is a financial asset within the scope of the standard are not to be separated; instead the hybrid financial instrument is to be assessed in its entirety as to whether it should be measured at amortised cost or fair value.

• IFRS 9 (2010) generally requires that the amount of change in fair value attributable to changes in the credit risk of liabilities designated by an entity as at fair value through profit or loss be presented in other comprehensive income, with only the remaining amount of the total gain or loss included in profit or loss. The amounts presented in other comprehensive income may not be subsequently reclassified to profit or loss but may be transferred within equity. However, if the recognition of gains and losses in other comprehensive income creates or enlarges an accounting mismatch in profit or loss, then the whole fair value change must be presented in profit or loss. Additionally, all fair value gains and losses continue to be included in profit or loss for loan commitments and financial guarantee contracts designated as fair value through profit or loss.

Currently, IASB has issued two versions of IFRS 9. The first version was issued in 2009 and the second version was issued in 2010. The 2010 version includes all the requirements of the 2009 version without amendment, but in addition, it also includes the requirements with respect to the classification and measurement of financial liabilities and the derecognition of financial assets and financial liabilities. The 2010 version supersedes the 2009 version. However, for annual periods beginning before 1 January 2013, an entity may elect to apply the 2009 version rather than the 2010 version.

If endorsed by the EU, IFRS 9 will become mandatory for the Bank's 2013 consolidated financial statements, with retrospective application required with certain exceptions. Earlier application of the standard is permitted and prior periods need not be restated if the Bank adopts the standard for reporting periods beginning before 1 January 2012. The Bank is currently in the process of evaluating the potential effect of this standard and the timing of its adoption by the Bank. Given the nature of the Bank's operations, the standard is expected to have a pervasive impact on the consolidated financial statements of the Bank.

Notes to the Consolidated Financial Statements

Business combination

4. Acquisition of group undertakings

At the end of December 2010 the Group acquired 100% of the share capital of Air Atlanta Property ehf., a property investment company based in England. The Bank ascertains that the subsidiary will be sold within a few months time and it has therefore been recognised as a non-current assets and disposal group held for sale according to IFRS 5 (see note 43).

The company was acquired at GBP 100 and was consolidated to the group on 31 December 2010.

The Bank has performed an in-house fair value measurement of assets, liabilities and equity based on a detailed valuation performed by a UK property surveyor.

The estimated fair value measurement of the business combination takes into account the condition of and uncertainties in relation to the underlying assets and liabilities. No goodwill arose on the acquisition.

Employees of the business combination are not included in the full-time equivalent staff number of the Bank.

Notes to the Consolidated Financial Statements

Business segments

5. A business segment is a distinguishable component of the Bank that is engaged in providing products or services that are subject to risks and rewards that may be different from those of other business segments. Transactions between the business segments are on normal commercial terms and conditions. No single customer of the Bank generates 10% or more of the combined revenue.

The accounting policies for the reportable segments are in line with the Bank's accounting policies. The segment profit presented is the profit reported to the chief operating decision maker (CEO) and the Board for the purpose of resource allocation and assessment of segment performance.

The Bank is organised into six main business segments:

- a) Retail Banking operates branches and asset-based financing. The branches provide services to individuals and small and medium-sized enterprises. The Bank operates 21 branches in Iceland.
- b) Corporate Banking offers financial services to larger corporations and investors. It operates internationally in two industry sectors: seafood and sustainable energy.
- c) Wealth Management offers a range of wealth and asset management products and services for individuals, corporations and institutional investors. In February 2011, Wealth Management changed its name to VíB.
- d) Markets incorporates brokerage services in securities, foreign currencies and derivatives, sale of securities issues, money market lending and advisory services.
- e) Midengi is an asset management company which was formed specifically to manage businesses which the Bank has acquired through repossessions following loan defaults, debt restructuring and bankruptcies of its customers. The aim is to divest the businesses at the earliest opportunity.
- f) Treasury incorporates unallocated capital, funding and interbank functions for the Bank.

Indirect cost from cost centres is allocated to the business segments. Cost centres comprise Head Office, Risk Management, Credit Control, Legal Department, Finance, Back Office, Branch Services, Operational Services, Quality Department, Software Solutions, Information Technology and Human Resources. There was no cost allocation in 2009.

Capital is allocated to business segments in 2010 based on the minimum Core Tier 1 ratio requirements set by the Financial Supervisory Authority (FME) of 12% of average risk weighted assets on which the segments receive risk free interest return. The remaining capital balance is reported under the Treasury unit. There was no capital allocation in 2009.

Below is an overview showing the Bank's performance with a breakdown by business segments.

The year 2010

Operations

	Retail Banking	Corporate Banking	Markets	Wealth Management	Midengi	Treasury	Cost centres & eliminations	Total
Net interest income	17,397	8,769	342	1,421	(380)	7,898	(574)	34,874

At 31 December 2009

	Retail Banking	Corporate Banking	Markets	Wealth Management	Midengi	Treasury	Cost centres & eliminations	Total
Total segment assets	299,275	191,092	2,562	14,720	9,846	198,096	1,751	717,342

In 2009 Corporate Finance was reported under Corporate Banking and Interbank was reported under Markets. In 2010 Corporate Finance was moved to Markets and Interbank was moved to Treasury. The 2009 comparable amounts have been adjusted accordingly although due to the difference in methodology in equity allocation and cost allocation the years are not comparable.

Notes to the Consolidated Financial Statements

Quarterly and half year statements

6. Operations by quarterly and half year:

2010	Q4	Q3*	Q2*	Q1*	Total
Net interest income	9,128	8,308	8,289	9,149	34,874
Net valuation changes on loans and receivables	12,267	2,714	702 (	1,176)	14,507
Provision for latent impairment losses	(41)	137 (	49) (	561) (	514)
Net fee and commission income	2,146	1,902	1,708	1,624	7,380
Net financial (expenses) income	(548)	72 (	49) (	385) (	910)
Net foreign exchange gain (loss)	1,391 (	2,406)	179 (	127) (	963)
Other net operating income	490	217	392	87	1,186
Administrative expenses	(4,525) (	4,653) (	4,941) (	4,354) (	18,473)
Other (expenses) income	(545)	114	15	133 (	283)
Profit before tax	19,763	6,405	6,246	4,390	36,804
Income tax	(3,323) (	1,544) (	1,540) (	807) (	7,214)

Notes to the Consolidated Financial Statements

Fair value information for financial instruments

8. The fair value of a financial instrument is the transaction price that would have been on the measurement date in an arm's length exchange motivated by normal business considerations. Where a market price is not readily available, the Bank applies valuation techniques based on estimates and assumptions that are consistent with that which market participants would use in setting a price for the financial instrument. In some instances the Bank uses approximation methods. These approximation methods are explained in more detail below.

The fair value of a financial liability with a demand feature, such as a demand deposit, is not less than the amount payable on demand, discounted from the first date that the amount could be required to be paid.

Financial instruments at amortised cost

Loan assets on the Bank's balance sheet that are carried at amortised cost, consist of two components: a) the original portfolio acquired from Glitnir and b) new loans originating in the Bank.

Vast majority of new loans carry floating interest rates. These loans have recently been issued and there has not been any significant change in the credit quality of the clients. Therefore, their fair value is considered to be fully represented by the carrying amount.

Loans in the acquired portfolio were discounted using an effective interest rate determined at the time of acquisition. In light of the still remaining uncertainty in the economic environment and in light of legal and political uncertainty, for example relating to foreign currency loans and the fishing quota system, the Bank believes that at this time it is not appropriate to reconsider the required yield for the acquired portfolio.

Based on the above, it is the Bank's opinion that the fair value of the acquired loan assets equals their carrying amount.

There is no active market with deposits or with debt issued by the Bank. Most deposits carry floating interest rates and the fair value of such deposits equals their carrying amount. For longer term fixed rate deposits, the Bank calculates the fair value with a duration approach, using the difference in each liability's current rate from the estimated rate that a similar product would carry today. *Debt issued and other borrowed funds* are valued in the same way.

For *Cash and balances with Central Bank* the carrying value is very well approximated by the carrying amount since they are very short term in nature. The liabilities in *Subordinated loans* carry floating interest rates and the Bank believes there has been no change in its funding premium from the time of issuance of these loans. Therefore, it is the Bank's opinion that their fair value equals their carrying amount.

The following table shows the fair value for the Bank's assets and liabilities measured at amortised cost.

	Carrying amount 2010	Fair value 2010	Carrying amount 2009	Fair Value 2009
Financial assets:				
Cash and balances with Central Bank	30,799	30,799	38,743	38,743
Loans to credit institutions	30,870	30,870	87,416	87,416
Loans to customers	515,161	515,161	489,611	489,611
Total financial assets	576,830	576,830	615,770	615,770
Financial liabilities:				
Deposits from Central Bank	26	26	28	28
Deposits from credit institutions	96,212	96,366	139,064	139,229
Deposits from customers	327,158	327,341	339,659	339,777
Debt issued and other borrowed funds	55,425	57,619	69,190	70,188
Subordinated loans	21,241	21,241	24,843	24,843
Total financial liabilities	500,062	502,593	572,784	574,065

Notes to the Consolidated Financial Statements

9. Fair value hierarchy

The table below analyses financial instruments carried at fair value, by valuation method. The different levels have been defined as follows:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities.

Level 2: Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices)

Level 3: Inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

The following table shows the level in the hierarchy into which the fair value of financial assets and liabilities carried at fair value in the consolidated balance sheet are categorised as at 31 December 2010:

Financial assets:	Level 1	Level 2	Level 3	Total
Bonds and debt instruments	35,627	30,591	1,806	68,024
Equities and equity instruments	362	50	2,610	3,022
Derivative instruments	12	0	58	70
Total financial assets	36,001	30,641	4,474	71,116
Financial liabilities:				
Financial liabilities held for trading	9,090	0	0	9,090
Derivative instruments	44	313	72	429
Total financial liabilities	9,134	313	72	9,519

The following table shows the level in the hierarchy into which the fair value of financial assets and liabilities carried at fair value in the consolidated balance sheet are categorised as at 31 December 2009:

Financial assets:	Level 1	Level 2	Level 3	Total
Bonds and debt instruments	36,271	30,430	0	66,701
Equities and equity instruments	540	0	1,710	2,250
Total financial assets	36,811	30,430	1,710	68,951
Financial liabilities:				
Financial liabilities held for trading	7,332	0	0	7,332
Total financial liabilities	7,332	0	0	7,332

Notes to the Consolidated Financial Statements

Net interest income

10. Net interest income is specified as follows:

	2010	2009
Interest income:		
Cash and cash balances with Central Bank	1,189	3,002
Loans and receivables	57,517	75,197
Financial assets held for trading	860	1,830
Financial assets designated at fair value through profit or loss	2,116	159
Financial assets share subscription	0	5,709
Other assets	94	1,016
Total interest income	61,776	86,913
Interest expense:		
Deposits from credit institutions and Central Bank	(5,084) (	11,045)
Deposits from customers	(16,396) (	34,061)
Borrowings	(3,564) (	7,673)
Subordinated loans	(1,060)	0
Financial liabilities held for trading	(425) (	503)
Other interest expense	(373) (	1,647)
Total interest expense	(26,902) (	54,929)
Net interest income	34,874	31,984
Interest spread (as the ratio of net interest income to the average carrying amount of total assets)	5.0%	4.5%

Net valuation changes on loans and receivables

11. Net valuation changes on loans and receivables:

	2010	2009
Impairment charged to comprehensive income:		
Specific impairment losses on financial assets	(27,798) (	17,618)
Reversal of impairment (impairment) of foreign exchange gain	8,297 (	8,231)
Net specific impairment losses on financial assets	(19,501) (	25,849)
Provision for latent impairment losses	(514) (	477)
Total impairment charged to comprehensive income (see note 35)	(20,015) (	26,326)
Net valuation changes:		
Income due to revised estimated future cash flow from loans	42,305	18,419
Net specific impairment losses on financial assets	(19,501) (	25,849)
Foreign exchange (loss) gain (see note 16)	(8,297)	8,231
Net valuation changes on loans and receivables	14,507	801

Reversal of impairment (impairment) of foreign exchange gain from customers with foreign exchange loans and cash flow in ISK is offset against total foreign exchange gain (loss) as per note 16. Impairment of foreign exchange gain is further discussed under note 2.5 (d).

Notes to the Consolidated Financial Statements

Net fee and commission income

12. Net fee and commission income is specified as follows:

	2010	2009
Fee and commission income:		
Asset management	1,265	1,302
Securities brokerage	426	363
Payment processing	3,734	3,327
Loans and guarantees	3,616	2,767
Foreign currency brokerage commission	1,192	1,519
Advisory	555	228
Other fees and commissions income	518	624
Total fees and commission income	11,306	10,130
Commission expenses:		
Interbank charges	(931)	(988)
Brokerage	(16)	(89)
Clearing and settlement	(2,799)	(1,840)
Other commission expenses	(180)	(152)
Total commission expenses	(3,926)	(3,069)
Net fee and commission income	7,380	7,061

Net financial (expenses) income

13. Net financial (expenses) income is specified as follows:

	2010	2009
Net (loss) gain on financial instruments held for trading	(12)	142
Net (loss) gain on financial instruments designated at fair value through profit or loss	(898)	143
Net financial (expenses) income	(910)	285

Net (loss) gain on financial instruments held for trading

14. Net (loss) gain on financial instruments held for trading are specified as follows:

	2010	2009
Shares and related derivatives	91	177
Bonds and related derivatives	(95)	0
Other derivatives	(8)	(35)
Net (loss) gain on financial instruments held for trading	(12)	142

Notes to the Consolidated Financial Statements

Net (loss) gain on financial instruments designated at fair value through profit or loss

15. Net (loss) gain on financial instruments designated at fair value through profit or loss are specified as follows:

	2010	2009
Shares	(898)	131
Bonds	(0)	12
Net (loss) gain on financial instruments designated at fair value through profit or loss	(898)	143

Net foreign exchange (loss) gain

16. Net foreign exchange (loss) gain is specified as follows:

	2010	2009
Assets:		
Cash and balances with Central Bank	(115)	44
Financial assets held for trading	(2,360)	1,946
Loans to credit institutions	(4,535)	2,580
Loans to customers	(14,569)	16,289
Other assets	(107)	(52)
Total	(21,686)	20,807
Liabilities:		
Deposits from credit institutions	691	309
Deposits from customers	8,114	(6,312)
Subordinated loan	3,602	0
Debt issued and other borrowed funds	0	(3,479)
Other liabilities	19	(473)
Total	12,426	(9,955)
Unadjusted net foreign exchange (loss) gain	(9,260)	10,852
Foreign exchange reversal on loans to customers with ISK cash flow*	8,297	(8,231)
Net foreign exchange (loss) gain	(963)	2,621

*Further discussed under note 2.5 (d)

Other net operating income

17. Other net operating income is specified as follows:

	2010	2009
Rental income	122	141
Realised gain on property and equipment	425	1,698
Agency fees and service level agreement fees	393	568
Other net operating income	246	353
Other net operating income	1,186	2,760

Notes to the Consolidated Financial Statements

Administrative expenses

18. Administrative expenses are specified as follows:

	2010	2009
Salaries and related expenses	9,207	8,036
Other administrative expenses	8,643	7,569
Depreciation	585	488
Amortisation	38	20
Administrative expenses	18,473	16,113

Included in other administrative expenses is ISK 607m (2009: ISK 672m) or 0.15% of the average guaranteed deposit balance in 2010 see note 57.

Staff and related expenses

19. Salaries and related expenses are specified as follows:

	2010	2009
Salaries	7,429	6,597
Pension and similar expenses	1,000	890
Social security charges	670	428
Other	108	121
Salaries and related expenses	9,207	8,036

20. The Bank's total number of employees is as follows:

	At 31 December 2010		At 31 December 2009	
	Parent Company	Group	Parent Company	Group
Average number of employees	933	1,080	899	1,039
Positions at the end of the year	943	1,093	842	981

Notes to the Consolidated Financial Statements

Employment terms for the Board of Directors CEO and Management Board

21. Employment terms for the Board of Directors, the CEO and Management Board are specified as follows:

2010	Salaries and fringe benefits
Birna Einarsdóttir, CEO	31.6
Friðrik Sophusson, Chairman of the Board	6.3
Vilhjálmur H. Vilhjálmsson, former Chairman of the Board	0.3
Martha Eiríksdóttir, former member of the Board	3.2
Kolbrún Jónsdóttir, member of the Board	1.2
Neil Graeme Brown, member of the Board	4.2
John E. Mack, member of the Board	4.2
Raymond J. Quinlan, member of the Board	3.9
Árni Tómasson, member of the Board	4.3
Marianne Okland, member of the Board	4.2
Alternate board members	1.1
7 Managing Directors	147.1
Total	211.6
2009	Salaries and fringe benefits
Birna Einarsdóttir, CEO	24.1
Vilhjálmur H. Vilhjálmsson, Chairman of the Board	3.1
Other Board Members	8.2
6 Managing Directors	114
Total	149.4

Auditors' fees

22. Auditors' fees are specified as follows:

	2010	2009
Audit of the annual accounts	146	107
Review of interim accounts	28	11
Other services	10	9
Auditors' fees	184	127

Thereof remuneration to others than the auditors of the parent company 27 28

The Bank accrued 50m in audit fees relating to the audit of the annual accounts 2010. Audit fees also include fees relating to the audit of the annual accounts 2009.

Net loss on non-current assets and disposal groups held for sale

23. Net loss on non-current assets and disposal groups held for sale are specified as follows:

	2010	2009
Net loss from sale of foreclosed mortgages (	307) (	263)
Net profit from sale of associates	24	0
Net loss on non-current assets classified as held for sale	(283)	(263)

Notes to the Consolidated Financial Statements

Effective income tax rate

24. The corporate income tax rate in Iceland for 2010 was 18.0%. The tax rate will increase to 20.0% with effective date from 1 January 2011. The effect of the increase in tax rate between the periods results in an increased tax charge relating to tax liabilities of ISK 2m and tax assets of ISK 28m which is recognised in the statement of comprehensive income in the current period. The effective income tax rate in the Bank's Income Statement for 2010 is 19,6%. The difference is specified as follows:

	2010		2009	
Profit before tax	36,804		28,660	
18% income tax calculated on the profit of the year	6,625	18.0%	4,299	15.0%
Effect of tax rates in foreign jurisdictions	1	0.0%	0	0.0%
Tax recognised outside profit and loss	23	0.1%	406	1.4%
Correction in accordance with ruling on prior years' taxable income	344	0.9% (	10) (	0.0%)
Effect of increase in the income tax rate	(18) (	0.0%)	0	0.0%
Income not subject to tax	(3) (	0.0%)	0	0.0%
Non-deductable expenses	260	0.7%	0	0.0%
Other differences	(18) (	0.0%) (	17) (	0.1%)
Income tax according to the statement of comprehensive income	7,214	19.6%	4,678	16.3%

Earnings per share

25. Earnings per share are specified as follows:

	2010	2009
Net profit of the equity holders of the parent, according to the financial statements	29,418	23,901
Average outstanding shares:		
Weighted average number of outstanding shares for the period, million	10,000	10,000
Basic Earnings per share, ISK	2.94	2.39
Average outstanding shares for the calculation of diluted earnings per share	10,000	10,000
Number of total shares at the end of the period, million, diluted	10,000	10,000
Diluted Earnings per share, ISK	2.94	2.39

Cash and balances with Central Bank

26. Specification of cash and balances with Central Bank:

	31.12.2010	31.12.2009
Cash on hand	1,833	1,842
Balances with Central Bank other than mandatory reserve deposits	16,352	10,708
Certificates of deposit	6,865	19,605
Included in cash and cash equivalents	25,050	32,155
Mandatory reserve deposits with Central Bank	5,749	6,588
Cash and balances with Central Bank	30,799	38,743

Mandatory reserve deposits are not available for use in the Bank's day-to-day operations.

Certificates of deposit (CDs) are short term instruments issued by the Central Bank at predetermined interest rates. CDs are issued solely to deposit money banks and other financial institutions and are not transferable except to other comparable institutions.

Notes to the Consolidated Financial Statements

Pledged assets

	31.12.2010	31.12.2009
27. Financial assets which have been pledged as collaterals for liabilities	58,469	67,744

Certain pools of loans to customers have been pledged as collateral for an asset backed bond and a currency swap.

Derivative financial instruments

	Assets	Notional values related to assets 31.12.2010	Liabilities	Notional values related to liabilities 31.12.2010
28. Derivatives held for trading:				
Cross currency interest rate swaps	0	0	312	48,217
Equity options	58	500	0	0
Foreign exchange forward	12	3,453	44	8,859
Foreign exchange swaps	0	231	0	1,537
Bond options	0	0	73	25,000
Total	70	4,184	429	83,613

There were no derivatives on the Bank's balance sheet at year end 2009.

Bonds and debt instruments

	31.12.2010	31.12.2009
29. Specification of bonds and debt instruments:		
Listed.....	36,201	36,271

Central government & state-owned enterprises	3,228 (	389)	2,839	4,472 (	490)	3,982
Loans to municipalities	5,226 (	317)	4,909	4,094 (	356)	3,738
Government secured customer loan	52,182	0	52,182	0	0	0
Total	576,876 (	61,715)	515,161	561,409 (	71,798)	489,611

Notes to the Consolidated Financial Statements

35. Financial assets - impairments

The following table shows the movement in the provision for impairment losses for loans and receivables.

	Individually assessed	Collectively assessed	Latent	Total 31.12.2010	Total 31.12.2009
At 1 January	49,519	22,395	477	72,391	47,002
Amounts written-off	(25,468)	(372)	0	(25,840)	(1,483)
Recoveries of amounts previously written-off	402	0	0	402	41
Principal credit adjustment	(1,198)	(3,469)	0	(4,667)	505
Charged to the comprehensive Income	22,368	(2,867)	514	20,015	26,326
At 31 December *	45,623	15,687	991	62,301	72,391

Notes:

*The provision for impairment losses at 31 December 2010 includes ISK 586 million relating to loans and advances to credit institutions (2009: ISK 593 million).

	31.12.2010	31.12.2009
Impairment losses charged to the comprehensive Income:		
Loans and advances to customers	18,615	26,272
Loans and advances to credit institutions	1,400	54
Impairment losses charged to the comprehensive Income	20,015	26,326

Notes to the Consolidated Financial Statements

Investments in associates

	31.12.2010	31.12.2009
36. Changes in investments in associates:		
Investments in associates at the beginning of the year	827	651
Purchases of shares in associates	54	74
Sales of shares in associates (	8) (	83)
Transfers	0	185
Revaluation (	519)	0
Investments in associates	354	827

37. The Bank's interest in its principal associates, which are unlisted, are as follows:

	Ownership at year-end
Eignarhaldsfélagid Fasteign hf.	38.0%
Capa Invest ehf.	36.9%
GLB Glacier Renewable Fund	48.3%
Reiknistofa Bankanna	23.5%
Audkenni hf.	20.0%
7 other associates	

Summarised financial information in respect of the Bank's associates is set out below:

	31.12.2010	31.12.2009
Total assets	77,900	82,982
Total liabilities (	64,327) (	63,539)
Net assets	13,573	19,443
Bank's share of net assets of associates	354	827

	2010	2009
Total revenue	1,815	9,178
Total loss in associates for the year	(2,428) (	4,518)

The Bank's share of losses in some associates exceeds the carrying amount of those associates and the Bank has discontinued to recognise its share of losses. The Bank is not under any obligation on behalf of its associates at year end and carrying amounts of those associates are reduced to nil at year end.

Notes to the Consolidated Financial Statements

Investments in subsidiaries

38. The parent's interests in its subsidiaries are as follows:

	Location	Owner-ship
Kreditkort hf.	Iceland	55%
Borgun hf.	Iceland	55%
Íslandssjódir hf.	Iceland	100%
Midengi ehf.	Iceland	100%
Glitnir Asset Management AS	Luxembourg	100%
Glacier Geothermal and Seafood Corporation	USA	100%
14 other wholly owned subsidiaries (SME)	Iceland	

On 30 December 2010 the Bank agreed to purchase additional 45% of the shareholding in Kreditkort hf. which would effectively bring the Bank's shareholding in Kreditkort to 100%. As a consideration, the Bank agreed to sell 5.703% of its shares in Borgun hf. which would effectively bring its total shareholding in Borgun hf. to 49.297%. At the reporting date, restrictive conditions in the agreement had not been met and therefore the terms of this agreement will not affect the Bank's consolidated financial statements.

At 31 December 2010 Kreditkort's capital ratio had fallen below the 8% required by law and was operating under an exemption from the FME. Kreditkort's status does not have a material effect on the consolidation.

Related party disclosures

39. Parent and ultimate controlling party

The Bank has determined that ISB Holding is the ultimate controlling party of the Bank with GLB Holding having significant influence. This is reflected in related party transactions.

Entities which are controlled, jointly controlled or significantly influenced by the government (state-controlled entities) are not considered as being a related party if neither entity actually influenced the other and if the state did not actually influence either entity with regards to transactions between them. Transactions with state-controlled entities during the year were based on general business terms of the Bank.

Related party transactions

The Bank has a related party relationship with its subsidiaries, the Board of Directors of the parent company, the executive vice presidents of the Bank, close family members of individuals referred to herein and entities with significant influence as the largest shareholders of the Bank.

All loans to employees are provided on general business terms of the Bank. Included in assets are loans to key management.

Related parties have transacted with the Group during the period as follows:

	31.12.2010			31.12.2009		
	Assets	Liabilities	Total	Assets	Liabilities	Total
CEO and Man. Directors (incl. comp. owned by them) ...	142 (	201) (	59)	292 (	298) (	6)
Members of the Board (incl. comp. owned by them)	522 (	1,690) (	1,168)	32 (	1,522) (	1,490)
Associated companies and other related parties	26,199 (	4,701)	21,498	35,089 (	4,526)	30,563
	26,863 (	6,592)	20,271	35,413 (	6,346)	29,067

	31.12.2010	31.12.2009
Guarantees	55	135
Loan Commitments and overdraft	187	222

Impairment allowances of ISK 31,5m were recognised in the year against balances outstanding with related parties.

No share option programmes were operated during 2010. For related party remuneration see note 21.

Investment property

40. Investment property is specified as follows:

	31.12.2010	31.12.2009
Investment property at 1 January	2,056	1,679
Additions during the year	0	377
Sales of investment property	(377)	0
Transferred	(1,679)	0
Investment property at 31 December	0	2,056

Notes to the Consolidated Financial Statements

Property and equipment

41. Property and equipment are specified as follows:

At 31 December 2010	Real estate	Fixtures, equipment & vehicles	Total
Historical cost			
Balance at the beginning of the year	132	2,673	2,805
Additions during the year	74	1,001	1,075
Transferred from Investment property	1,572	0	1,572

Official real estate value of buildings and leased land			265
Insurance value of buildings as at 31.12.2009			312
Insurance value of fixtures, equipment and vehicles as at 31.12.2009			1,827

Notes to the Consolidated Financial Statements

Intangible assets

42. Intangible assets are specified as follows:

	31.12.2010 Software	31.12.2009 Software
Historical cost		
Balance at the beginning of the year	127	0
Additions	118	127
Balance at the end of the year	245	127
Accumulated amortization		
Balance at the beginning of the year (	20)	0
Amortisation during the year (	38)	(20)
Balance at the end of the year (	58)	(20)
Net book value at the end of the year	187	107
Amortisation rates	25%	25%

Notes to the Consolidated Financial Statements

Non-current assets and disposal groups held for sale

43. Specification of non-current assets and disposal groups held for sale:

	31.12.2010	31.12.2009
Reposessed collateral	7,435	2,440
Assets of disposal groups classified as held for sale	16,054	16,574
Total	23,489	19,014

Reposessed collateral:

	31.12.2010	31.12.2009
Residential property	4,880	1,218
Industrial property	75	778
Equipment	160	99
Shares	2,067	0
Inventory	0	345
Other assets	253	0
Total	7,435	2,440

The Bank classified the assets and liabilities of its subsidiaries Eik Fasteignafélag hf., Steypustöðin ehf. and Air Atlanta Properties Ltd. as assets and liabilities of disposal groups held for sale.

Assets of disposal groups classified as held for sale:

	31.12.2010	31.12.2009
Cash	5	252
Investment properties	15,086	14,781
Equipment	609	733
Receivables	98	334
Inventory	157	10
Other assets	99	464
Total	16,054	16,574

Liabilities associated with assets classified as held for sale:

	31.12.2010	31.12.2009
Payables	59	1,480
Borrowings and other liabilities	16,383	15,425
Total	16,442	16,905

Other assets

	31.12.2010	31.12.2009
44. Other assets are specified as follows:		
Other receivables	2,219	4,042
Accruals	620	424
Prepaid expenses	303	179
Inventory (real estate)	1,889	3,761
Other assets	513	355
Other assets	5,544	8,761

The inventory comprises real estate valued at the lower of cost and net realisable value.

Notes to the Consolidated Financial Statements

Financial liabilities

45. Financial liabilities balances:

	31.12.2010	31.12.2009
Short positions in listed bonds	9,090	7,332
Financial liabilities	9,090	7,332

Short positions are in listed government bonds. As a primary dealer the bank has access to securities lending facilities provided by the Central Bank and the Housing Financing Fund. Majority of the short positions have a maturity of less than a year and can be settled with cash on maturity of the bonds.

Deposits from Central Bank and credit institutions

	31.12.2010	31.12.2009
46. Deposits from Central Bank and credit institutions are specified as follows:		
Repurchase agreements with Central Bank	26	28
Deposits from credit institutions	96,212	139,064
Deposits from Central Bank and credit institutions	96,238	139,092

Deposits from customers

	31.12.2010	31.12.2009
47. Deposits from customers are specified by type as follows:		
Demand deposits	214,597	205,653
Time deposits	112,561	134,006
Deposits from customers	327,158	339,659

48. Deposits from customers are specified by owners as follows:

	Amount	31.12.2010 % of total	Amount	31.12.2009 % of total
Central government and state-owned enterprises.....	4,065	1%	4,735	1%
Municipalities.....	4,927	2%	3,423	1%
Other companies.....	185,886	57%	180,944	53%
Individuals.....	132,280	40%	150,557	45%
Deposits from customers	327,158	100%	339,659	100%

Notes to the Consolidated Financial Statements

Debt issued and other borrowed funds

49. Specification of debt issued and other borrowed funds:	31.12.2010	31.12.2009
Issued bonds	52,717	56,827
Loans from credit institutions	353	1,446
Other debt securities	2,355	10,917
Debt issued and other borrowed funds	55,425	69,190

Subordinated loans

50. Specification of subordinated loans:

	Currency	Interest	Maturity date	Book value 31.12.2010
Loans which qualify as Tier 2 capital:				
Subordinated loans - unlisted	EUR	5.0%	31.12.2019	21,241
Tier 2				21,241
Subordinated loans				21,241
	Currency	Interest	Maturity date	Book value 31.12.2009
Loans which qualify as Tier 2 capital:				
Subordinated loans - unlisted	EUR	4.7%	31.12.2019	24,843
Tier 2				24,843
Subordinated loans				24,843

Subordinated loans consists of a Tier 2 government bond of EUR 138m.

Tax assets and tax liabilities

51. Tax in the balance sheet:		31.12.2010		31.12.2009
	Assets	Liabilities	Assets	Liabilities
Current tax	0	9,024	0	4,807
Deferred tax	283	18	84	354
Tax in the balance sheet	283	9,042	84	5,161

Notes to the Consolidated Financial Statements

52. Changes in the deferred tax assets and the tax liabilities during the year are as follows:

	Assets	Liabilities
Deferred tax assets and tax liabilities 1.1.2009	5	172
Calculated income tax for 2009	79	4,644
Income tax payable in 2010	0 (	4,539)
Effect of the increase in tax rate	0	44
Income tax payable in 2010 correction due to 2008	0	33

Tax loss of subsidiary carried forward	72	(1)	0	0
Other items	85 (	4)	84	82
Deferred tax assets and tax liabilities at the end of 2010	283	18	84	354

Other liabilities

54. Specification of other liabilities:

	31.12.2010	31.12.2009
Accruals	1,951	2,063
Liabilities to retailers for credit card provision	12,921	12,189
Guarantees	1,664	2,879
Chargeable gain tax	1,357	1,641
Unsettled securities transactions	1,386	64
Deferred income	345	135
Sundry liabilities	7,070	4,086
Other liabilities	26,694	23,057

Notes to the Consolidated Financial Statements

Equity

55. Share capital

Authorised share capital of the Bank is 10,000m ordinary shares of ISK 1 krona each. At 31.12.2010 paid up share capital totalled ISK 65,000m which is the total stated share capital of the Bank.

Issued share capital

	31.12.2010	31.12.2009
Ordinary fully paid shares of ISK 1 krona each	10,000	10,000
Share capital	10,000	10,000

The Bank has one class of ordinary shares which carry no right to fixed income.

Share premium account

	31.12.2010	31.12.2009
Premium arising on issue of equity shares	55,000	55,000
Share premium account	55,000	55,000

Total share capital

	31.12.2010	31.12.2009
Ordinary share capital	10,000	10,000
Share premium account	55,000	55,000
Total share capital	65,000	65,000

56. Other reserves are specified as follows:

Notes to the Consolidated Financial Statements

Off balance sheet items

57. Obligations:

	31.12.2010	31.12.2009
Guarantees granted to customers	8,404	8,058
Committed undrawn lines of credit	13,453	5,028
Unused overdrafts	17,186	15,779
The Depositors and Investors Guarantee Fund – declaration of guarantee	3,689	3,697

The Depositors and Investors Guarantee Fund

The aim of the Depositors and Investors Guarantee Fund (the Fund) is to partly cover claims from deposit customers in case commercial and savings banks become insolvent.

According to the current rules, total assets of the Fund shall amount to 1% of the average balance of guaranteed deposits held by commercial and savings banks in the preceding year. If the Fund is smaller than the 1%, commercial and savings banks are charged an annual premium of 0.15% of their average guaranteed deposit balance for the preceding year. Total assets of the Securities Department shall amount to a minimum of ISK 100m.

If the total assets of the Fund are below the required 1% of total average guaranteed deposits held, the banks are required to sign a declaration of guarantee for their share of the balance. At 31 December 2010 the Bank's declaration of guarantee amounted to ISK 3,689m.

The maximum payment the Fund is allowed to charge the commercial and savings banks at any one time is 10% of the minimum size of the Fund and the amount is limited by the amount as stated in each declaration. However, this option only becomes exercisable in the event of a bankruptcy of any of the banks that results in the Fund being emptied. For 2010 the maximum annual charge exercisable for each commercial and savings bank amounted to ISK 1.6bn.

In 2010 the Bank recognised ISK 607m, being 0.15% of the average guaranteed deposit balance, in the current accounting period. The guarantee amount is disclosed as an off balance sheet item since it is not based on past events but is intended as a guarantee to cover possible future events.

Claims made on the Fund due to a settlement in relation to the Icesave agreement would completely empty the Fund. Therefore, the rules of the Fund have been under review and a bill has been presented to the Parliament where it is proposed that a separate Securities Department is set up and the premium increased. At the same time, it is likely that e.g. wholesale deposits, deposits from entities which are under majority ownership by the commercial and savings banks and most deposits from pension funds would be excluded from the Fund and thus not covered in case of a bankruptcy.

Operating lease commitments

58. Future non-cancellable minimum operating lease payments, where the Group is the lessee, are due as follows:

	31.12.2010	31.12.2009
Up to 1 year	422	517
1-5 years	2,110	1,537
Later than 5 years	4,405	5,909
Operating lease commitments	6,937	7,963

Balance of custody assets

59. Balance of custody assets:

	31.12.2010	31.12.2009
Custody assets	642,502	682,166

Custody assets are under custody, but not managed by the Bank.

Notes to the Consolidated Financial Statements

Contingencies

60. Litigation threats

Several former customers of Glitnir private banking services have threatened litigation against the Bank in order to claim compensation for alleged mistakes made by Glitnir's employees. A few of those customers have already filed a lawsuit against the Bank with the Reykjavík District Court. The Bank has not accepted any liability and will challenge the lawsuits on the grounds that these claims relate to events that happened prior to the incorporation of the Bank and the assignment of certain liabilities and assets on 15 October 2008 and therefore are not the responsibility of the Bank in any way. The District Court of Reykjavik has now ruled in favour of the Bank in the case of Hrafninn ehf. vs. Íslandsbanki stating that the Bank cannot be held responsible for Glitnir employees' mistakes. This ruling may be appealed. The Bank estimates the total amount of compensation liabilities currently claimed by customers of Glitnir to be ISK 5.5bn.

Netting agreement

When certain assets and obligations were transferred from Glitnir to the Bank, the FME ruled that customers would, upon liquidation of Glitnir, maintain their right to claim netting of assets and liabilities held by Glitnir prior to acquisition on 15 October 2008. As a result, the Bank anticipates that it may have to write off those assets netted against liabilities in Glitnir.

The Bank has made an agreement with Glitnir that the latter will compensate the Bank for losses that may result from the netting of assets and liabilities. The claims in question are priority claims on the liquidated assets of Glitnir and the netting exercise is unlikely to affect either the net asset value or the earnings of the Bank.

Allocation of liens, guarantees and comparable rights

When certain assets and obligations were transferred from Glitnir to the Bank, the FME ruled that the Bank would take over all rights used to secure the performance of obligations of the debtors of Glitnir, including all liens, guarantees and other comparable rights connected to the claims of the Bank.

The Bank should, however, be accountable to Glitnir for specific collateral of its customers, as applicable, due to claims and derivatives which were not transferred to the Bank. The Bank has, in accordance with this decision, transferred to Glitnir certain collateralised obligations of customers. One customer filed a lawsuit against the Bank with the Reykjavík District Court challenging the Bank's decision to transfer the customer's money market deposit to Glitnir, which the Bank, in good faith, identified as collateral for a foreign exchange future contract. The claim was for approximately ISK 450m. The District Court ruled in favour of the Bank, although that ruling may still be subject to an appeal. Any future allocation of collateral will be made under an agreement with Glitnir, whereby Glitnir indemnifies the Bank against any future claims arising from the transfer of such rights.

Indexed loans and foreign currency loans

The Bank has received several letters from attorneys representing the Bank's customers, relating to possible or threatened lawsuits against the Bank due to loans in foreign currency or CPI linked. Firstly, claims may be made on the grounds that the liability of certain customers has become void in part or whole due to foreign currency loans provided by the Bank to its customers being deemed to be in breach of articles 13 and 14 of the Laws on Interest 38/2001 and therefore deemed unlawful. Secondly, in the case of the CPI indexed loans (CPI - Consumer Price Index), it is claimed that the rise in inflation has, due to recent events in the Icelandic economy, been far beyond the legitimate expectations of the borrowers and should therefore be declared null and void by the courts. Moreover, it is claimed that the loan obligations and their implementation is grossly unfair. In this context the customers cite article 36 of the Contract Laws 07/1936 which gives the Courts the authority to change or declare void unreasonable or unfair provisions in private contracts.

The Bank has challenged the claims made and maintains that the debt obligations are legal and valid. The Law on Interest 38/2001 does not address obligations in foreign currency and as such it does not state any given benchmarks, such as exchange rates of foreign currencies. There is no dispute over the validity of foreign currency loans as such, only the means of which the proceeds of the loans are disbursed and the instalments collected. The overriding principle in Icelandic Law is that contracts shall be upheld according to their terms.

Notes to the Consolidated Financial Statements

60. Cont'd

Two contradicting judgements were passed in relation to the above in two districts. Both concerned leasing contracts used by companies operating solely in that sector. Both parties appealed and the Supreme Court ruled that the contracts in question should be considered as ISK loans and the principal could not, therefore, be linked to foreign currencies. However, the Court did not rule on which interest rate should be applied to the contracts. The Supreme Court has now ruled that for loans whose principal is deemed to have an illegal link to foreign currencies, the lowest offered rates for non-indexed loans published by the Central Bank is to be applied instead of the contractual interest rates. While the leasing contracts of the Bank clearly fall into the same category, the effect on other types of foreign currency loan contracts remains uncertain. However, it is clear that loan obligations containing illegal foreign currency provisions will not be declared null and void. The amount owed may however be changed by the Courts. In the end, the wording of the individual contract forms could be the deciding factor. The contract forms used to document foreign currency linked and foreign currency denominated loans by the Bank are numerous and, depending on method of categorising, 20-30 forms have been used besides leasing contracts. The forms have been assessed as to their validity as true foreign currency loan contracts. Based in part on this assessment, the Bank has made some assumptions as to the possible financial effect of the lawsuits, adjusting for the fact that the Bank has already offered its customers principal adjustment of their foreign currency loans and taking into account that a ruling on a certain type of interest has been passed. Several court rulings are expected on whether or not certain types of loans are truly foreign currency denominated loans or are deemed to be illegally linked to foreign currency.

The Supreme Court ruling on which interest rates to use for loan contracts that are deemed to be illegally linked to foreign currency has reduced the uncertainty for the Bank with respect to the financial impact of future rulings. It is assumed that the ruling, referring to the lowest Central Bank rate, gives precedence for the outcome of other court cases.

Based on the Supreme Court ruling for car loans, the Bank has offered all customers of Asset Based Financing to settle their loan contracts based on the lowest Central Bank rates. The financial impact of this is already reflected in the accounts.

The District Court of South Iceland ruled on 29 October 2010 that a loan in foreign currency granted by the Bank should indeed be treated as a foreign currency denominated contract. The contract in question was not considered to be in breach of articles 13 and 14 of the Laws on Interest 38/2001 and was therefore deemed lawful. Furthermore, the loan obligations and their implementation is not unfair according to article 36 of the Contract Laws 07/1936 which gives the Courts the authority to change or declare void unreasonable or unfair provisions in private contracts. The case has been appealed to the Supreme Court.

In order to address the uncertainty of which foreign currency loans should be deemed to be illegally linked to foreign currency, the government introduced a bill which proposed a change to the law on interest and indexation. The bill was passed as Law 151/2010, taking effect on the 28 December 2010. Based on the context of this new legislation, the Bank will treat all foreign currency dominated car loans according to the ruling of the Supreme Court. All customers with foreign currency mortgages are to be presented with an offer of having their mortgage recalculated according to a similar formula, regardless of the validity of the contracts in question. The definition of a mortgage in the law is tied to the tax law. The recalculation has to be offered if the debtor was eligible for a refund in part of paid interest (interest subsidy) of the loan. The Bank has decided to expand this definition to cover all residential loans to individuals. Debtors are not obliged to accept the offer.

At year end 2010, the book value of the Bank's foreign currency denominated loans reflected the Bank's estimate of the risk inherent in these loans. Provision has been made for repayments to customers that have already paid up their loans. The Bank does not expect to incur losses in excess of what has already been recognised through the impairment process and is fully reflected in the financial statements.

Dispute over the Bank's claim on Straumur's assets

Following the takeover of Straumur-Burðarás Investment Bank hf. (Straumur) by the FME on 4 April 2009, the Bank assumed deposit obligations from Straumur for the value of ISK 45 billion. The Bank also provided Straumur with funds to meet obligations towards depositors in its Danish branch. As a payment, Straumur issued a bond guaranteed with a lien over nearly all of Straumur's assets. Deposits created in relation to settlement of prior debts were excluded.

The government committed to fund the Bank's liquidity needs in relation to the said obligations by lending government bonds to the Bank. If the Straumur bond is not fully paid by the end of the term of the bond, the Bank may hold the remaining government bonds without further obligation.

The Straumur Resolution Committee accepted and acknowledged the claim and the lien. However, some creditors of Straumur disputed the Bank's claim on the Straumur estate and the Resolution Committee filed the dispute with the Reykjavík District Court.

The creditors claimed that the Emergency Act passed on 6 October 2008, where deposits were moved up to priority ranking on bankruptcy, was unconstitutional and therefore illegal. The creditors claimed that the bond and lien should never have been issued and was therefore void and should not enjoy priority ranking.

Disputes over the Bank's claim on Straumur have now been settled and creditors have withdrawn their claim on the Bank. The settlement involved the Bank allowing a payment of EUR 20 million to be made to creditors before Straumur's obligations to the Bank were paid off and allowed for the creditors to be granted security rights over certain assets after Íslandsbanki. In return, creditors withdrew their claims and the Bank was granted parallel security rights with creditors, in a group of assets previously free of pledge.

Notes to the Consolidated Financial Statements

60. Cont'd

Íslandssjódir

Ten parties have brought a suit in the Reykjavik District Court against Íslandssjódir hf., a fund management company which is a wholly owned subsidiary of the Bank. The plaintiffs, all of which were holders of shares in the fund 'Sjóður 9' (money market fund) when the Icelandic financial system collapsed in October 2008, principally claim that Íslandssjódir is liable for their loss from 29 September 2008 until the winding up of the fund on 30 October 2008 since it allegedly incurred as a result of the operations of the fund being contrary to Icelandic laws and regulations on investment funds. Íslandssjódir disputes the claim and has instructed an attorney to defend against the claims on its behalf.

Formal investigation by the EFTA Surveillance Authority regarding alleged state aid granted by the Icelandic State to investment funds and associated fund management companies connected to the three failed Icelandic banks Glitnir, Kaupthing and Landsbanki

At the height of the financial crisis in Iceland in early October 2008, investment funds suspended redemption of unit certificates in order to protect the equality of unit certificate holders. The funds were subsequently wound-up and the unit certificate holders paid out the value of their unit shares. This was partly achieved by the banks buying the assets (mainly domestic bonds) held by the funds and adding the proceeds from that sale to assets already held in the form of deposits. The price paid for the assets was decided by the boards of the newly restored banks based on internal valuations and valuations of external consultants (audit firms).

In this case, it is alleged that management companies of the investment funds and depositories of the three major Icelandic banks received unlawful state aid from the Icelandic authorities in October 2008. It is alleged that the State influenced the decisions of the new banks to purchase assets from the funds (managed by their subsidiaries) on favourable terms and, thus, enabling them to wind-up the funds and repay investors when there was no effective market for the assets.

The Icelandic State and the banks claim that the transactions were neither influenced by the State nor funded by state resources. Even if the banks were public undertakings, the acquisition was decided on independently by each bank and based on commercial motives. The assets acquired were valued in a professional manner, albeit in a period of uncertainty.

Formal investigation by the EFTA Surveillance Authority procedure into state aid granted in the restoration of certain operations of Glitnir and the establishment and capitalisation of Íslandsbanki

The Authority decided to open formal investigations into the state aid granted in October 2008 and September 2009 to rescue domestic operations of the three main Icelandic banks; Glitnir, Kaupthing and Landsbanki; and to establish and capitalise new successor banks, now called Íslandsbanki, Arion and NBI (Landsbankinn) respectively.

The measures to restore certain operations of the old Icelandic banks and to establish and capitalise new banks should have been notified prior to their implementation. The Icelandic authorities should also have submitted detailed restructuring plans outlining viable futures for the banks without a need for state support.

The Authority has to assess whether the state aid granted to the banks adequately addresses each bank's situation without unduly distorting competition. In order to do so, it is imperative that detailed restructuring plans are submitted. As part of the investigation, the Authority will assess (among other measures) potential aid to the new banks, in the form of a special liquidity facility available to Íslandsbanki, and the transfer of assets and deposits liabilities from Straumur to Íslandsbanki.

The Icelandic authorities and the Bank claim that the measures are compatible with the functioning of the EEA Agreement on the basis of Article 61(3)(b) of the Agreement, on the basis that they were necessary in order to remedy a serious disturbance in the Icelandic economy. The Icelandic authorities have stressed that the situation in Iceland in October 2008 was extreme and required immediate action in order to restore financial stability and confidence in the Icelandic economy.

Íslandsbanki will submit a detailed restructuring plan to the Authority outlining viable futures for the Bank without a need for state support.

Funding of a tax credit for interest payments on mortgages

The Icelandic government, financial institutions and pension funds have undertaken to find ways to address the debt problems of Icelandic home owners. To this end a letter of intent was signed between the parties on 3 December 2010 with the aim of funding a new tax credit for interest payments on mortgages. The credit will amount to ISK 6 billion per year over a two year period in 2011 and 2012. To date, the scale of the bank's contribution has not been determined.

Notes to the Consolidated Financial Statements

Risk management

63. The Bank is exposed to various risks through its use of financial instruments. Managing these risks is an integral part of the Bank's operations.

Risk governance

The ultimate responsibility for ensuring an adequate risk management framework lies with the Board of Directors. The Board defines and communicates the acceptable level of risk through the Bank's risk management policies.

The implementation of the risk management framework, limit setting and monitoring is delegated to the Risk Committee, the Asset and Liability Committee (ALCO) and the Executive Board. The members of those boards are appointed by the CEO.

The Risk Committee is responsible for supervising and monitoring the Bank's credit and credit concentration risks on a consolidated basis. The Risk Committee governs the Bank's credit policies and procedures. The Risk Committee can delegate authorisation power to its subcommittees.

The ALCO supervises the Bank's other financial risks including market risk, liquidity risk, interest rate risk, and the Bank's capitalisation. The ALCO decides on and sets limits for these risks and the Bank's capital allocation framework.

The Executive Board is responsible for the operational risk framework and for managing other risk factors such as reputational risk and business risk.

The compliance function is responsible for ensuring that the processes and the business conducted within the Bank are in accordance with external laws and regulations and internal directives and instructions.

Group Internal Audit conducts independent evaluations and provides assurance for the internal controls and risk management for its appropriateness, effectiveness and its compliance to the Bank's directives. The Chief Audit Executive (CAE) is appointed by the Board and accordingly has an independent position in the Bank's organisational chart. The CAE is responsible for internal audit within the Bank.

Credit risk

64. Credit risk is defined as current or prospective risk to earnings and capital arising from an obligor's potential failure to meet the terms of any contract with the Bank or otherwise fail to perform as agreed.

This risk comprises default risk, recovery risk, country risk, settlement risk and credit concentration risk.

Credit concentration risk is the significantly increased risk that is driven by common underlying factors, e.g. sector, economy, geographical location, type of financial instrument or due to connections or relations among counterparties. This includes large individual exposures to parties under common control and significant exposures to groups of counterparties whose likelihood of default is driven by common underlying factors.

Credit risk arises principally from the Bank's loans and advances to customers and other banks but also from balances with the Central Bank and off-balance sheet items such as guarantees, loan commitments and derivatives.

The Bank has policies and procedures dedicated to accepting, measuring, and managing credit risk. The objective of the Bank's credit risk management is to achieve an appropriate balance between risk and return and to minimise potential adverse effects of credit risk on the Bank's financial performance.

A thorough analysis of the counterparty's financial standing, analysis of past and estimated future cash flows as well as the borrower's general ability to repay its obligations forms the basis for all credit decisions. The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, groups of borrowers, countries and industry segments. The Bank measures and consolidates its credit risk for each counterparty or group of connected clients in accordance with internal and external criteria of connection between parties.

The Bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security in borrower's assets. The principal collateral types for loans are real properties, vehicles, equipment, vessels and securities. When applicable, other credit risk mitigants are employed.

The loan portfolio acquired from Glitnir is the largest part of the credit exposure of the Bank. Due to the extraordinary circumstances in the Icelandic economy and the fact that the loan portfolio was acquired at a deep discount, care must be taken when interpreting conventional measures of credit risk.

Notes to the Consolidated Financial Statements

Credit risk exposure

65. The Bank's credit risk exposure is comprised of both on-balance sheet and off-balance sheet items. Maximum exposure to credit risk for on-balance sheet assets is the net carrying amount as reported in the balance sheet. The exposure for off-balance sheet items is the amount that the Bank might have to pay out against financial guarantees and loan commitments.

The credit exposure before taking account of any collateral held or other credit enhancements is as follows:

	Maximum exposure	
	31.12.2010	31.12.2009
Cash and balances with Central Bank	30,799	38,743
Loans to credit institutions:	30,870	87,416
Loans to credit institutions	30,870	39,537
Government secured customer loan	0	47,879
Loans to customers:	515,161	489,611
Loans to individuals:	172,713	174,961
Overdrafts	7,943	8,199
Credit cards	14,307	17,154
Term loans	33,148	36,079
Mortgages	105,637	106,267
Leases	11,678	7,262
Loans to corporate entities:	282,518	306,930
Overdrafts	12,964	12,569
Credit cards	1,156	1,012
Term loans	252,755	276,814
Leases	15,643	16,535
Loans to state owned and public sector entities	2,839	3,982
Loans to municipalities	4,909	3,738
Government secured customer loan	52,182	0
Bonds and debt instruments:	68,024	66,701
Central governments	65,382	66,268
Local governments	0	59
Corporates	2,130	0
Credit Institutions	490	374
Other	22	0
Derivatives	70	0
Other assets	1,085	8,761
	646,009	691,232
Financial guarantees	8,404	8,058
Loan commitments	13,453	5,028
	21,857	13,086
Total	667,866	704,318

Collateral and other credit mitigants vary between types of exposure. Loans to banks are for example often unsecured. For loans to individuals the principal collateral taken is residential property against mortgages. In the case of corporate entities the Bank takes a charge over fixed and current assets as well as employing covenants in loan agreements. Loans to government entities and to municipalities are usually unsecured. Derivative exposures are generally made under ISDA master agreements with Credit Support Annex or corresponding terms with pledged collateral in the form of cash and government bonds.

Government secured customer loan is of special consideration. This exposure was classified as loans to credit institutions in 2009 but was reclassified in 2010. For clarity the exposure is now carved out as a separate line under loans to customers in the credit risk notes.

Notes to the Consolidated Financial Statements

66. Loans are classified as impaired loans if contractual cash payments are not expected to be fulfilled and if financial restructuring of the obligor is expected to lead to a loss on that particular loan. In most cases, loss is avoided because of the difference between the claim value and the carrying amount resulting from the deep discount of the acquired loan portfolio. Other loans to the same obligor might even be expected to be restructured with a gain from the carrying amount and therefore an impairment does not necessarily indicate that there is a net loss for the Bank.

Loans are also classified as impaired if the Bank has made impairments to offset currency movements, see note 77 on currency risk. For individuals and smaller companies this is the main reason for loans being classified as impaired. This impairment does not signal a loss from the deep discount.

The full carrying amount of all loans which give rise to a specific impairment or currency impairment is included in impaired loans even if parts are covered by collateral. Therefore the carrying amount of impaired loans does not indicate amounts that are likely to be lost.

	Neither past due nor impaired	Past due but not impaired	Impaired	Total
At 31 December 2010				
Loans to credit institutions.....	30,842	8	20	30,870

Notes to the Consolidated Financial Statements

67. Cont'd

Past due loans that have not been impaired are expected to be restructured without any loss to the Bank. In some cases, loss is avoided because of the difference between the claim value and the carrying amount resulting from the deep discount of the acquired loan portfolio. In some cases there is sufficient collateral, and in some cases the assessment is that contractual payments will be fulfilled.

The majority of past due loans are loans that were acquired from Glitnir at a deep discount and there is a significant difference between claim value and book value of these loans. Loans that are being restructured are in some cases classified as past due.

68. The industry breakdown below shows the Bank's credit exposure by industry and customer segment. The breakdown follows an internal industry classification which is based on the Icelandic ISAT2008 that derives from the European NACE Rev. 2. The main differences to ISAT2008 are that Seafood is considered to be a separate sector consisting of both fishing and processing of seafood, Individuals are a single segment, and Investment companies are singled out as a sector rather than being included in Services. The breakdown of loans to credit institutions and loans to customers is as follows:

	31.12.2010	31.12.2009
Individuals.....	172,713	174,961
Real estate.....	74,525	77,629
Seafood.....	67,933	72,120
Investment companies.....	42,124	53,412
Financial institutions.....	35,118	39,537
Commerce.....	29,949	29,911
Services.....	20,951	20,151
Industry.....	16,100	21,726
Construction.....	17,088	20,034
Transportation.....	4,723	5,134
Other.....	4,877	6,813
Loans to Sovereign and state guaranteed entities.....	2,839	3,982
Loans to municipalities.....	4,909	3,738
Government secured customer loan.....	52,182	47,879
	546,031	577,027

69. Large Exposure Disclosure

When the Bank's total exposure to a group of connected clients exceeds 10% of the Bank's capital base it is considered a large exposure. The exposure is evaluated net of credit risk mitigating effects eligible according to FME rules no 216/2007.

When assessing the exposure both on-balance sheet and off-balance sheet items from all types of financial instruments are included as defined in the FME rules. The Bank has internal criteria that define connections between clients. These criteria reflect the Bank's interpretation of Article 1.a in Act no. 161/2002 on Financial Undertakings where groups of connected clients are defined.

The Bank has one large exposure to a group of connected clients that sum up to less than 16% of the Bank's capital base. No large exposure exceeds the maximum 25% set by law.

Notes to the Consolidated Financial Statements

Liquidity risk

70. Íslandsbanki defines liquidity risk as the risk of not being able to fund its financial obligations or planned growth, or only being able to do so substantially above the prevailing market cost of funds.

Liquidity risk management

The Bank's main source of funding is customer deposits. The Bank's Treasury is responsible for the Bank's funding and long-term liquidity management. The Interbank desk is responsible for day-to-day liquidity management.

The Assets & Liability Management & Capital Management (ALM) unit within Risk management is responsible for measuring, monitoring and reporting on the Bank's liquidity position.

The Bank's liquidity risk management policy assumes that the Bank has at all times sufficient liquidity to meet liabilities maturing over the next twelve months.

The tables below show the contractual maturity profile for Íslandsbanki's financial assets and liabilities.

For dated financial liabilities the amounts are grouped into maturity buckets according to contractual maturities of principal and estimated contractual payments of interest. For demand deposits or other non-dated liabilities, the figures are grouped according to the first possible required payment date. Thus, the total figures for each liability class are higher than the respective balance sheet amount. This form of presentation is in line with IFRS requirements but does not reflect the Bank's internal modeling of liquidity risk.

Maturity analysis 31 December 2010

	On demand	Up to 3 months	3-12 months	1-5 years	Over 5 years	No maturity	Total
Financial Liabilities							
Short positions	9,090	0	0	0	0	0	9,090
Deposits from Central Bank	26	0	0	0	0	0	26
Deposits from credit institutions	58,439	18,419	11,051	8,705	0	0	96,614
Deposits from customers	243,797	39,600	3,965	36,165	8,716	0	332,243
Debt issued and other borrowed funds	1,899	2,084	6,458	33,754	29,887	0	74,082
Subordinated loans	0	266	822	6,019	29,671	0	36,778
Other financial liabilities	15,712	6,687	9,237	527	507	1,011	33,681
Total financial liabilities	328,963	67,056	31,533	85,170	68,781	1,011	582,514

Off-balance sheet liabilities show the amount of contractual obligations that the Bank has taken towards customers, either by committing to lend out money in the future or as third party guarantees. The amounts shown reflect the maximum amount, not taking into account the Bank's ability to reduce overdraft or credit card limits before the current undrawn amount is fully utilised by the customer. These obligations all fall into the first time bucket since contractually, on a case by case basis, the Bank could be required to fulfil these obligations instantaneously.

	On demand	Up to 3 months	3-12 months	1-5 years	Over 5 years	No maturity	Total
Off balance sheet liabilities							
Financial guarantees	8,404	0	0	0	0	0	8,404
Undrawn loan commitments	13,453	0	0	0	0	0	13,453
Undrawn overdraft	17,186	0	0	0	0	0	17,186
Credit card commitments	25,436	0	0	0	0	0	25,436
Total	64,479	0	0	0	0	0	64,479

Total non-derivative financial liabilities

and off-balance sheet liabilities 393,442 67,056 31,533 85,170 68,781 1,011 646,993

Notes to the Consolidated Financial Statements

70. Cont'd

The table below shows the contractual cash flow of the Bank's derivative liabilities, i.e. derivatives that have a negative carrying amount at the date of reporting. Derivatives with a positive carrying amount are detailed separately. For derivatives settled on a gross basis, the cash flow for both legs of the derivative is shown, since netting cannot be applied upon settlement. Currently, the Bank has no derivatives settled on a net basis.

Derivative financial liabilities	On demand	Up to 3 months	3-12 months	1-5 years	Over 5 years	No maturity	Total
Gross settled derivatives							
Inflow	0 (	10,811) (	1,267) (	57,837) (	25,000)	0 (	94,915)
Outflow	0	10,797	1,403	60,757	25,113	0	98,070
Total	0 (	14)	136	2,920	113	0	3,155
Net settled derivatives	0	0	0	0	0	0	0
Total	0 (	14)	136	2,920	113	0	3,155

Maturity classification of assets is based on contractual maturity. For loans that were acquired at a deep discount and have not yet been restructured, the contractual amount is scaled to reflect the carrying amount of the claim. For bonds and debt instruments in the banking book the maturity classification is based on contractual amount while for bonds and debt instruments held for trading the maturity classification is based on the estimated liquidation time of the asset.

Financial assets

	On demand	Up to 3 months	3-12 months	1-5 years	Over 5 years	No maturity	Total

Notes to the Consolidated Financial Statements

70. Cont'd

As a part of managing liquidity risk, the Bank holds a portfolio of liquidity back-up to meet unexpected outflow of funds or a temporary shortage in access to new funding. These assets are subject to a strict criteria with respect to maximum liquidation time and price volatility. The table below shows the composition and amount of the Bank's liquidity back-up at the end of 2009 and 2010. The liquidity back-up lowered by ISK 6 billion in 2010 which is in line with a reduction in the balance sheet and reduced concentration in the Bank's deposit base. Thus, the reduction in the liquidity back-up has not resulted in lower internal liquidity ratios.

Composition and amount of liquidity back-up	31.12.2010	31.12.2009
Cash and balances with Central Bank	30,799	38,743
Domestic bonds eligible as collateral against borrowing at the Central Bank	54,881	50,130
Foreign government bonds	30,378	29,584
Short-term placements with credit institutions	28,332	31,887
Government liquidity facility	25,000	25,000
Composition and amount of liquidity back-up	169,390	175,344

Notes to the Consolidated Financial Statements

Market risk

71. The Bank defines market risk as the current or prospective risk to earnings and capital from adverse movements in the level or volatility of prices of market instruments, including those that arise from factors such as interest rates, equity prices, commodity prices and foreign exchange rates.

Market risk management

The Bank's market risk appetite is determined by the Board of Directors. The Asset and Liability Committee (ALCO) approves on limits for portfolios and products in accordance with the market risk policy approved by the Board. The market risk unit is responsible for monitoring and reporting on market risk. The objective of market risk management is to manage and control market risk exposures within acceptable parameters.

The Bank separates exposures to market risk into trading and non-trading portfolios. The Bank's primary sources of market risk in the trading portfolio are shares, debt instruments and foreign currency positions. All financial assets and liabilities in the trading portfolio are recognised at fair value and all resulting changes are immediately reflected in the income statement. Market risk in the non-trading portfolio is mainly due to mismatches in interest rate terms and denomination currency of assets and liabilities. These mismatches are reported to management and are subject to regulatory and internal limits.

Interest rate risk

72. Interest rate risk is the risk that the Bank will experience deterioration in its financial position as interest rates change over time.

The Bank uses sensitivity measures like Basis Point Value (BPV) to measure and manage risk arising from its fixed income exposures. The BPV measures the effect of a 0.01% upward parallel shift in the yield curve on the fair value of the bonds.

73. Interest rate risk in the trading portfolio

The fixed income trading unit invests mainly in government bonds and bonds issued by the Housing Financing Fund (HFF), which are guaranteed by the Icelandic government. These positions can include short position. Government bonds are either indexed to the Icelandic Consumer Price Index (CPI) or non-indexed, with duration up to 9 years. HFF bonds are CPI linked and have duration up to 14 years. All bond trading positions are subject to BPV limits, both intraday and end-of-day. In addition to BPV limits short and long positions in each instrument are subject to separate limits. Market risk monitors these limits and reports all breaches to the Asset and Liability Committee (ALCO).

The maximum total position in the trading portfolio over the year was ISK 43.9 billion (2009: ISK 33.5 billion). The largest position in indexed securities was ISK 4.7 billion (2009: ISK 3.5 billion) and the largest position in non-indexed securities was ISK 43.5 billion (2009: ISK 31.0 billion). The BPV's at the end of the year are representative for the average positions during the year.

Trading bonds and debt instruments, long positions			2010			2009		
	MV	Duration	BPV	MV	Duration	BPV		
Indexed	2,124	9.01	(1.91)	2,800	6.51	(1.82)

Notes to the Consolidated Financial Statements

73. Cont'd

The Bank holds a significant amount of foreign triple-A credit rated government bills in its liquidity portfolio. The bills are held for cash management purposes and can be liquidated with short notice. The duration of these instruments ranges up to six months and the sensitivity measured in BPV is ISK -0.6 million (2009: ISK -0,7 million).

Country	2010		2009	
	Market value	BPV	Market value	BPV
Canada	0	0.00	3,570	(0.03)
France	5,380	(0.06)	0	0
Germany	3,844	(0.04)	0	0
Netherlands	5,379	(0.10)	0	0
Norway	1,953	(0.06)	6,458	(0.21)
UK	3,473	(0.02)	9,066	(0.19)
USA	10,695	(0.34)	10,489	(0.24)

74. Sensitivity analysis for interest rate risk for trading portfolios

For sensitivity analysis in the trading portfolio the Bank uses a 100 bps shift in ISK, non-indexed and indexed, interest rates. Shifts in rates in other currencies are scaled down in accordance with lower volatility. The following table demonstrates the sensitivity to a reasonable change in interest rates, with all other variables held constant, of the Bank's equity and income statement.

Sensitivity analysis for trading bonds and debt instruments

		2010	2009		
		Profit or loss			
	Parallel shift in yield curve (basis points)	downward shift	upward shift	downward shift	upward shift
Currency (ISK million)					
ISK, indexed	100	138	(138)	40	(40)
ISK, non-indexed	100	125	(125)	158	(158)
CHF	40	0	0	0	0

Other total	40	3	(3)	9	(9)
Total		284	(284)	224	(224)

Notes to the Consolidated Financial Statements

75. Interest rate risk in the non-trading portfolio

Interest rate risk in the non-trading portfolio arises from the Bank's core banking activities. The main source of this type of interest rate risk is the risk of loss from fluctuations in future cash flows or fair value of financial instruments as market interest rates change over time, reflecting the fact that the Bank's assets and liabilities are of different maturities and are priced relative to different interest rates.

The Bank holds a government bond designated at fair value amounting to ISK 30.3 billion (2009: ISK 30.4 billion). The bond pays floating rates and carries relatively low interest rate risk.

The Asset and Liability & Capital Management unit is responsible for measuring, monitoring and reporting on the Bank's interest rate risk in the non-trading portfolio. The Treasury unit is responsible for managing the Bank's interest rate risk within limits set by ALCO. The Bank uses traditional measures for assessing the sensitivity of the Bank's financial assets, financial liabilities and earnings to changes in the underlying interest rates. Standard scenarios include an adverse 100 basis point parallel shift in all yield curves.

Non-trading portfolio interest rate adjustment periods 31 December, 2010

Assets	0-3 months	3-12 months	1-2 years	2-5 years	5-10 years	Over 10 years	Total

76. Sensitivity analysis for interest rate risk for non-trading portfolios

For sensitivity analysis in the non-trading portfolio a 100 bps shift is applied for non-indexed ISK interest rates. Shifts in other currencies are chosen using the same scaling factors as in the trading portfolio. CPI linked ISK rate shifts are also scaled down to reflect significantly stronger mean reversion than for non-indexed rates. The table shows how applied shifts would affect the Bank's equity and income statement.

Non trading bonds and debt instruments		2010		2009	
		Profit or loss			
	Parallel shift in yield curve (basis points)	downward shift	upward shift	downward shift	upward shift

Total		368	(368)	350	(350)

Notes to the Consolidated Financial Statements

Currency risk

77. Currency risk arises when financial instruments are not denominated in reporting currency which gives rise to the impact of changes in exchange rates on the income statement and balance sheet.

Late in 2010, the Bank entered into a currency swap which significantly narrowed the currency imbalance. The currency swap along with spot transactions have brought the Bank's adjusted currency imbalance close to zero. At year-end 2010 the adjusted imbalance amounted to ISK 0.8 billion (2009: ISK 38.9 billion).

The currency imbalance presented below is based on the contractual currency of the underlying balance sheet and off-balance sheet items. The off-balance sheet amounts represent the notional amounts of derivatives and unsettled spot agreements. Most of the net adjusted currency imbalance is due to loans with a non-ISK contractual currency to customers with ISK income (FX-ISK loans). As a part of the transfer of assets from Glitnir, the Bank determined that these loans have a recovery value that is limited in ISK terms. To reflect the ISK based recovery value of these loans the Bank has impaired fully the foreign exchange gains on these assets since the date of transfer. Should there be an appreciation of the ISK there will be a corresponding reversal of the impairment charge. This is in accordance with IFRS accounting standards.

The Bank's regulators allow for an adjustment of the contractual currency imbalance to reflect the recovery of foreign currency denominated loans to customers with ISK income. The tables below summarise the Bank's exposure to currency risk at year end 2010 and 2009, based on contractual currencies, off-balance sheet items along with the currency adjustment.

Notes to the Consolidated Financial Statements

78. Sensitivity analysis towards currency risk

The table below shows how the adjusted imbalance is affected by either depreciation or appreciation of each currency assuming other risk factors are held constant. The shift number is the 99% percentile of a 10-day return distribution for each currency for the previous 365 days. The adverse movement of each currency is applied for the impact of the shift and demonstrates how equity and income statement would be affected by the shifts.

Sensitivity towards currency risk 31 December 2010

Currency (shift)	Shift Effect
EUR (4%)	(163)
USD (4%)	(214)
CHF (4%)	(362)
GBP (4%)	0
JPY (4%)	(19)
Other (5%)	(32)
Total	(790)

Sensitivity towards currency risk 31 December 2009

Currency (shift)	Shift Effect
EUR (11%)	(329)
USD (10%)	(194)
CHF (12%)	(2,155)
GBP (12%)	(123)
JPY (12%)	(1,533)
Other (9%)	(223)
Total	(4,557)

For loans in foreign currency the Bank accounts for the effects of foreign exchange rate changes to ISK as differences in loan value. The portion of a foreign exchange rate fluctuation which results in a change to loan value depends on how the borrower's ability to repay the loan changes as the currency in question fluctuates. Thus, a depreciation in the ISK does not result in gain in foreign currency loan value for ISK income customers as it does for loans to customers having foreign currency income.

Shares and equity instruments

79. The Bank's equity exposure in the trading book arises from proprietary trading and market making, mainly in shares denominated in ISK. Limits on both aggregated market value and maximum exposure in single securities are aimed at reducing the equity risk and concentration risk in the Bank's portfolio. Shares and equity instruments in the non-trading portfolio are designated at fair value through profit or loss or are classified as held for sale.

80. Sensitivity analysis for shares and equity instruments

The following table demonstrates how reasonable shifts in the prices of trading and non-trading portfolio would affect the equity and net financial income. Shifts applied for the trading and non-trading portfolio are 20% and 40% respectively.

Sensitivity analysis for equities

Sensitivity analysis for equities		2010		2009	
		Profit or loss			
Portfolio (ISK million)	Change in equity prices	downward shift	upward shift	downward shift	upward shift
Trading	20%	(85)	85	(95)	95
Non-trading	40%	(1,045)	1,045	(710)	710
Total		(1,130)	1,130	(805)	805

Notes to the Consolidated Financial Statements

Derivatives

81. The Bank uses derivatives to hedge currency exposure. The Bank carries relatively low indirect exposure due to margin trading with clients where the Bank holds collaterals for possible losses. Other derivatives in the Bank held for trading or for other purposes are insignificant.

Inflation risk

82. The Bank is exposed to inflation risk since the book value of CPI-indexed assets exceed CPI-indexed liabilities. The book value of these assets and liabilities changes according to changes in the CPI at any given time and all changes in the CPI-index affect profit and loss. The mismatch between the CPI-indexed assets and liabilities is reported to ALCO and is subject to limits decided by the committee. On 31 December 2010 the CPI gap amounted to ISK 25.1 billion (2009: ISK 26.8 billion). Thus a 1% increase in the index would have a positive impact on the profit and loss account to the amount of ISK 25 million profit and a 1% decrease would result in a similar loss, other things held constant.

Notes to the Consolidated Financial Statements

Capital management

83. Risk exposure and capital base

Icelandic capital adequacy rules are based on the EU capital requirements directives (CRD). The capital adequacy rules require an absolute minimum capital level of 8% of risk weighted assets.

As part of the conditions for granting the Bank an operating license as a financial undertaking, the Icelandic Financial Supervisory Authority (FME) requires the Bank to maintain a minimum Core Tier 1 ratio of 12% of risk weighted assets and a total capital ratio, allowing for subordinated Tier 2 debt, of 16%.

The Bank's regulatory capital calculations for credit risk and market risk are based on the standardised approach and the capital calculations for operational risk are based on the basic indicator approach. Market risk exposure for currency risk is based on the adjusted currency imbalance described in note 77.

The table below shows the capital base, risk weighted assets and capital ratios of Íslandsbanki on 31 December 2010 and 2009.

	2010	2009
Tier 1 capital		
Ordinary share capital	10,000	10,000
Share premium	55,000	55,000
Other reserves	2,498	2,059
Retained earnings	53,174	24,204
Minority interest	791	840
Tax assets	(283)	0
Intangible assets	(187)	(107)
Total Tier 1 capital	120,993	91,996
Tier 2 capital		
Qualifying subordinated liabilities	21,241	24,843
Total regulatory capital	142,234	116,839
Risk weighted assets		
- due to credit risk	440,586	454,773
- due to market risk:	14,766	42,117
Market risk, trading book	4,583	3,195
Currency risk FX	10,183	38,922
- due to operational risk	79,079	92,929
Total risk weighted assets	534,431	589,819
Capital ratios		
Tier 1 ratio	22.6%	15.6%
Total capital ratio	26.6%	19.8%

In 2010, the Bank did an assessment of its internal capital adequacy (ICAAP). Such an assessment is an integral part of the Bank's capital and risk management. Current capitalisation levels are well above the requirements of the ICAAP.

Notes to the Consolidated Financial Statements

Operational risk

84. Operational Risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition includes legal risk, but excludes strategic and reputational risk.

The Bank has implemented a framework to manage the operational risk. Under this framework, operational risk management is carried out in a consistent manner across all business units in the Bank with the primary responsibility for the assessment and managing of operational risk residing within each business unit.

The Bank uses the Basic Indicator Approach of the Capital Requirements Directive (CRD) to calculate the capital requirements for operational risks.
